

# Invasive, naturalized and casual alien plants in southern Africa: a summary based on the Southern African Plant Invaders Atlas (SAPIA)

L. HENDERSON\*

**Keywords:** biomes, casual alien plants, invasive plants, Lesotho, naturalized plants, roadside surveys, SAPIA mapping project, South Africa, Swaziland

## ABSTRACT

The primary objective of this publication is to provide an overview of the species identity, invasion status, geographical extent, and abundance of alien plants in South Africa, Swaziland and Lesotho, based on field records from 1979 to the end of 2000. The dataset is all the species records for the study area in the Southern African Plant Invaders Atlas (SAPIA) database during this time period. A total of 548 naturalized and casual alien plant species were catalogued and invasion was recorded almost throughout the study area. Most invasion, in terms of both species numbers and total species abundance, was recorded along the southern, southwestern and eastern coastal belts and in the adjacent interior. This area includes the whole of the Fynbos and Forest Biomes, and the moister eastern parts of the Grassland and Savanna Biomes. This study reinforces previous studies that the Fynbos Biome is the most extensively invaded vegetation type in South Africa but it also shows that parts of Savanna and Grassland are as heavily invaded as parts of the Fynbos. The Fabaceae is prominent in all biomes and *Acacia* with 17 listed species, accounts for a very large proportion of all invasion. *Acacia mearnsii* was by far the most prominent invasive species in the study area, followed by *A. saligna*, *Lantana camara*, *A. cyclops*, *Opuntia ficus-indica*, *Solanum mauritianum*, *Populus alba*/*xcanescens*, *Melia azedarach*, *A. dealbata* and species of *Prosopis*.

## INTRODUCTION

### History of roadside surveys in South Africa

Roadside surveys of invasive plants in South Africa were pioneered by Henderson and Musil (née Duggan) starting in 1979 in the central Transvaal, now Gauteng (Wells, Duggan & Henderson 1980), with the remainder of the Transvaal surveyed in 1982 and 1983 (Henderson & Musil 1984). Surveys of the rest of South Africa were conducted by Henderson from 1986, starting with Natal (Henderson 1989), followed by the Orange Free State (Henderson 1991a), northern Cape (Henderson 1991b), eastern Cape (Henderson 1992), western and central Cape (completed in 1993 but unpublished), and southern and southwestern Cape (Henderson 1998a).

All terminology used in this paper relating to invasive plants such as ‘alien’, ‘invasive’, ‘naturalized’, ‘casual alien’, ‘weed’ and ‘environmental weed’ conforms, as far as possible, to the definitions provided by Richardson *et al.* (2000) and Pyšek *et al.* (2004). The method used in these surveys was designed initially to make use of otherwise unproductive travelling time whilst engaged in other research projects. The method was refined as the surveys progressed until a standardized method was developed (see Henderson 1992, 1998a). The presence and abundance of all alien trees, large shrubs and conspicuous climbers which appeared to be naturalized or occurring outside of cultivation were recorded for each veld type category, habitat type (roadsides and adjoining veld, and streambanks) and quarter-degree/fifteen minute square traversed by road.

Recordings of species on roadsides and in the adjacent veld were made from a moving vehicle along road

transects of between five and 10 km long. Recordings of streambank species were made at virtually all watercourse crossings on the survey route.

### The Southern African Plant Invaders Atlas mapping project (SAPIA)

The Southern African Plant Invaders Atlas (SAPIA) is a mapping project, launched in January 1994, to collate information on the distribution, abundance and habitat types of invasive and naturalized alien plants in southern Africa (Henderson 1998b). The first phase of SAPIA, involving volunteer participants, was scheduled for a five-year period, ending in December 1998. The atlas region covered South Africa, Lesotho and Swaziland. Information was recorded on two standardized atlas sheets, with slightly different species lists, covering the western and eastern halves of the atlas region. One hundred plant taxa were listed on each sheet, with a combined total of 161 species. A pocket field guide was compiled to help with the identification of all listed species (Henderson 1995).

### SAPIA database

A computerized SAPIA database was created by incorporating all Henderson survey data ( $\pm$  23 000 records) and SAPIA phase one project data ( $\pm$  20 000 records). The SAPIA project continued on an ad hoc basis and by the end of 2000 a total of  $\pm$  48 000 records had been accumulated. Thereafter, the SAPIA initiative dwindled due to lack of funding. Only 10 000 records were added in the five year period from 2001 to the end of 2005. The SAPIA project was revived in 2006 with funding from the Department of Water Affairs and Forestry’s Working for Water Programme. The SAPIA database has been computerized using Microsoft Access and is housed at the Plant Protection Research Institute in Pretoria.

## Objectives of this study

- To provide an overview of the species identity, invasion status, geographical extent, and abundance of alien plants in South Africa, Swaziland and Lesotho, based on field records from 1979 to the end of 2000.
- To highlight the most prominent invaders in the region as a whole, in each of the biomes, and in riparian and wetland habitats.
- To compare invasion and provide species profiles for each of the biomes.

## METHODS

### Sampling method

The dataset for this study is all the species records for South Africa, Swaziland and Lesotho in the SAPIA database collected from 1979 until the end of 2000 ( $\pm 48\,000$  records). During this period a concerted effort was made to gather as much data from as wide an area as possible. The information gathered is the best available data concerning the extent of invasion and species composition, at least of the larger trees, shrubs and conspicuous climbers, in the study area over this time period.

The SAPIA dataset was subdivided on a quarter-degree square (QDS) basis into six datasets representing the biomes of southern Africa. According to Rutherford (1997) there are seven biomes in southern Africa: Savanna, Fynbos, Forest, Grassland, Nama-Karoo, Succulent Karoo and Desert. The Forest Biome in southern Africa is minuscule, only occurring in the Knysna area. However, if all the forest patches elsewhere are included, its area increases several-fold (Rutherford 1997). In this study Forest refers to the Forest Biome and also forest habitats within the Savanna, Fynbos and Grassland Biomes. The Desert Biome occurs almost exclusively in Namibia, except for a very small patch along the Orange River bordering on South Africa that has been excluded from this study.

## Data treatment

### Abundance

Species abundance ratings in the SAPIA database are qualitative estimates. Table 1 shows the abundance ratings used in the SAPIA database and the equivalent rating used in Henderson surveys. For the purposes of this study, species abundance ratings were converted to a numerical value as done in previous surveys (Henderson 1998a) and each abundance rating was expressed in numbers of individuals or groups per 10 km transect/recording (Table 1).

### Prominence

A similar formula was used in this study to calculate prominence as in previous studies by Henderson (1998a). The prominence value of a species  $x$  in category  $y$  (biome or study area) was calculated as follows:

$$\text{prominence value} = \frac{\frac{\text{total abundance of species } x \text{ in category } y}{\text{sum of the abundances of all species in category } y} \times 100 + \frac{\text{total species records of species } x \text{ in category } y}{\text{sum of the records of all species in category } y} \times 100}{+}$$

The highest prominence values in a given category which add up to  $\pm 160$  points out of a total of 200 are printed in bold in Appendices 1–3. The cut-off point is arbitrary but represents the upper 80% of the summed prominence values.

## RESULTS

A total of 548 naturalized and casual alien plant species were catalogued in the SAPIA database for South Africa, Swaziland and Lesotho from 1979 to the end of 2000 (Appendix 4). At least 119, mainly herbaceous, taxa are considered to have been under-recorded and

TABLE 1.—Abundance ratings used in Henderson surveys, SAPIA and this study

Henderson surveys					SAPIA	This study
Rating	Roadsides and veld	No.*	Streambanks	Rating	All habitats†	All habitats‡
9	A virtually continuous, almost pure stand	1 000+	Any number, with cover more than 75% of the reference area	7	Very abundant	1 000
8	The commonest species in a generally continuous tree or shrub layer	500–999	Any number, with 50–75% cover	6	Very abundant	1 000
7	Less abundant than above but > 20 individuals or groups per km	200–499	Any number, with 25–50% cover	5	Abundant	200
6	10–20 individuals or groups per km	100–199	Any number with 5–25% cover	4	Abundant	200
5	5–10 individuals or groups per km	50–99	Numerous, but < 5% cover or scattered, with cover up to 5%	3	Frequent	50
4	2–5 individuals or groups per km	20–49	Few, with small cover	2	Frequent	50
3	$\pm 1$ individual or group per km	5–19	Solitary, with small cover	1	Occasional	10
2	Less abundant than above but more than 1 individual or group per 5 km	2–4			Occasional	10
1	$\pm 1$ plant or group per 5–10 km	1			Rare	1

\*, approximate numbers of individuals or groups per 10 km transect.

†, very abundant extensive stands; abundant; many clumps or stands; frequent, many sightings of single plants or small groups; occasional, a few sightings of one or a few plants; rare, one sighting of one or a few plants.

‡, weighted abundance, numbers of individuals or groups per 10 km transect/recording.

the results presented are not a true reflection of their status (see asterisked species in Appendix 4). A further 45 species were recorded in the study area after 2000 and are asterisked in the species checklist (Appendix 5). A total of 601 species are listed in the full checklist given in Appendix 5—this is estimated to be about half the total number of naturalized and casual alien plant species in southern Africa. The most comprehensive listing of naturalized species in southern Africa, compiled by Wells *et al.* (1986), contains approximately 965 species, predominantly herbaceous. The SAPIA database, with a bias towards trees and shrubs, has an additional 231 species not listed by Wells *et al.* (1986).

### Geographical extent of invasion

Alien plant invasion was recorded almost throughout the study area. Figure 1A shows invasion in terms of species numbers per QDS and Figure 1B shows the severity of invasion per QDS based on the total weighted abundance of all species per QDS. Most invasion, in terms of both species numbers and total species abundance, was recorded along the southern, southwestern and eastern coastal belts and in the adjacent interior. This corresponds with the regions of highest rainfall (Schulze 1997), urban development, and cultivation of agricultural and silvicultural crops. It also includes the whole of the Fynbos and Forest, and the moister eastern parts of the Grassland and Savanna Biomes (Figure 1C). Distribution maps of 234 species, which include all declared species under the Conservation of Agricultural Resources Act, Act 43 of 1983, and amended in 2001, are given in the field guide *Alien weeds and invasive plants* (Henderson 2001).

### Prominent invasive species

There were 97 prominent invasive species in the study area and each of the biomes (Appendices 1–3). All these species were invading natural and semi-natural habitats.

#### Study area

Fifty species account for most invasion (the upper 80% of the summed prominence values) in the study area (Appendix 1). *Acacia mearnsii* (black wattle) was the most prominent species by far, with a value of 18.37 (out of a maximum of 200) which is more than double the value of the second-ranked species, *A. saligna* (Port Jackson). The remaining top ten most prominent invaders in the study area were in order, *Lantana camara* (lantana), *A. cyclops* (rooikrans), *Opuntia ficus-indica* (sweet prickly-pear), *Solanum mauritianum* (bugweed), *Populus alba*/x<sub>canescens</sub> (white/grey poplars)—values of these two taxa were combined where they were difficult to distinguish at a distance during roadside surveys), *Melia azedarach* (seringa), *A. dealbata* (silver wattle) and *Prosopis* spp. (*P. glandulosa* var. *torreyana*, *P. velutina* and their hybrids)(mesquite trees). Together these species cover almost the entire study area (Figures 2, 3).

#### Savanna Biome

Forty-eight species were the most prominent invaders in the Savanna Biome (Appendix 2). *Lantana camara*

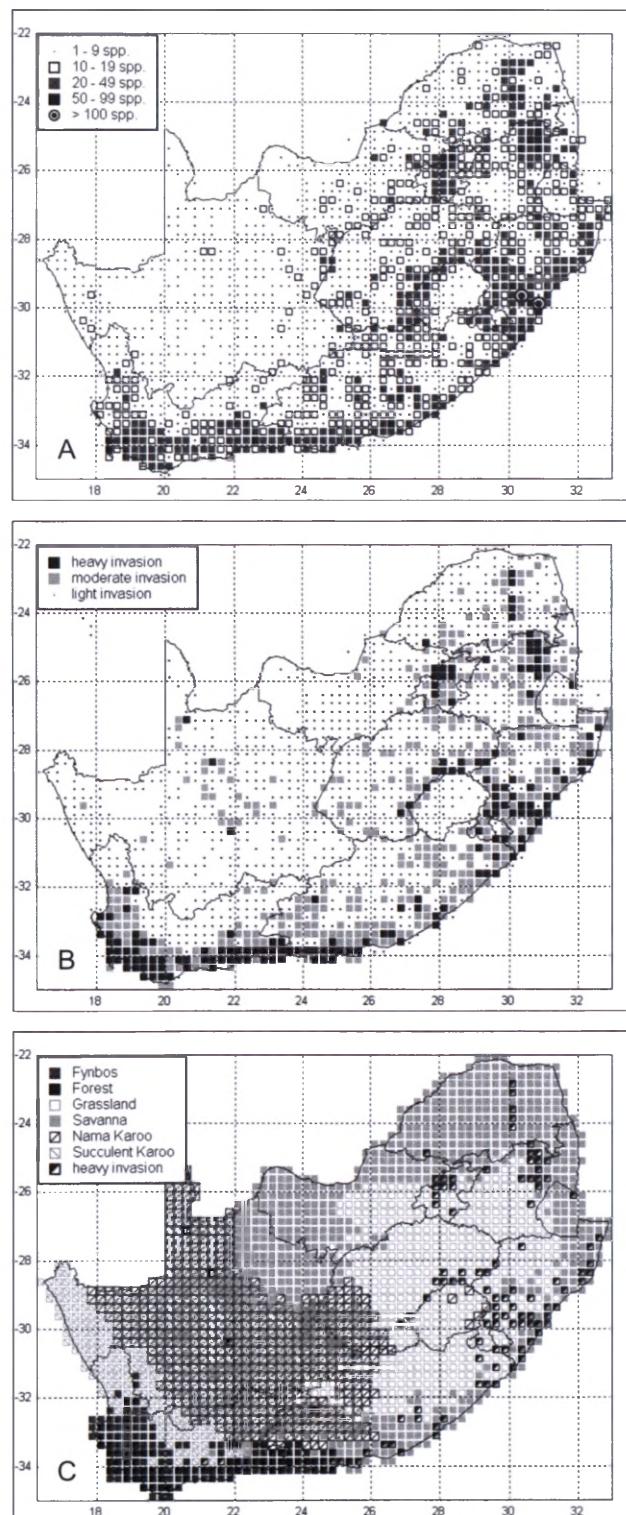

FIGURE 1.—A, species numbers per quarter-degree square in study area; B, severity of invasion per quarter-degree square. Light invasion: < 1 individual or group per km. Moderate invasion: up to 5 individuals or groups per km; some species forming stands. Heavy invasion: up to 50 individuals or groups per km; many species forming stands; some completely dominating landscape. C, heavy invasion in relation to biomes in study area.

was the most prominent species with a prominence value of 20.6, followed by *Chromolaena odorata* (trifid weed) with a value of 14.2 and *Melia azedarach* with a value of 12. The remaining top ten invaders were, in order, *Solanum mauritianum*, *Acacia mearnsii*, *Opuntia ficus-indica*, *Ricinus communis* (castor-oil plant), *Psidium*

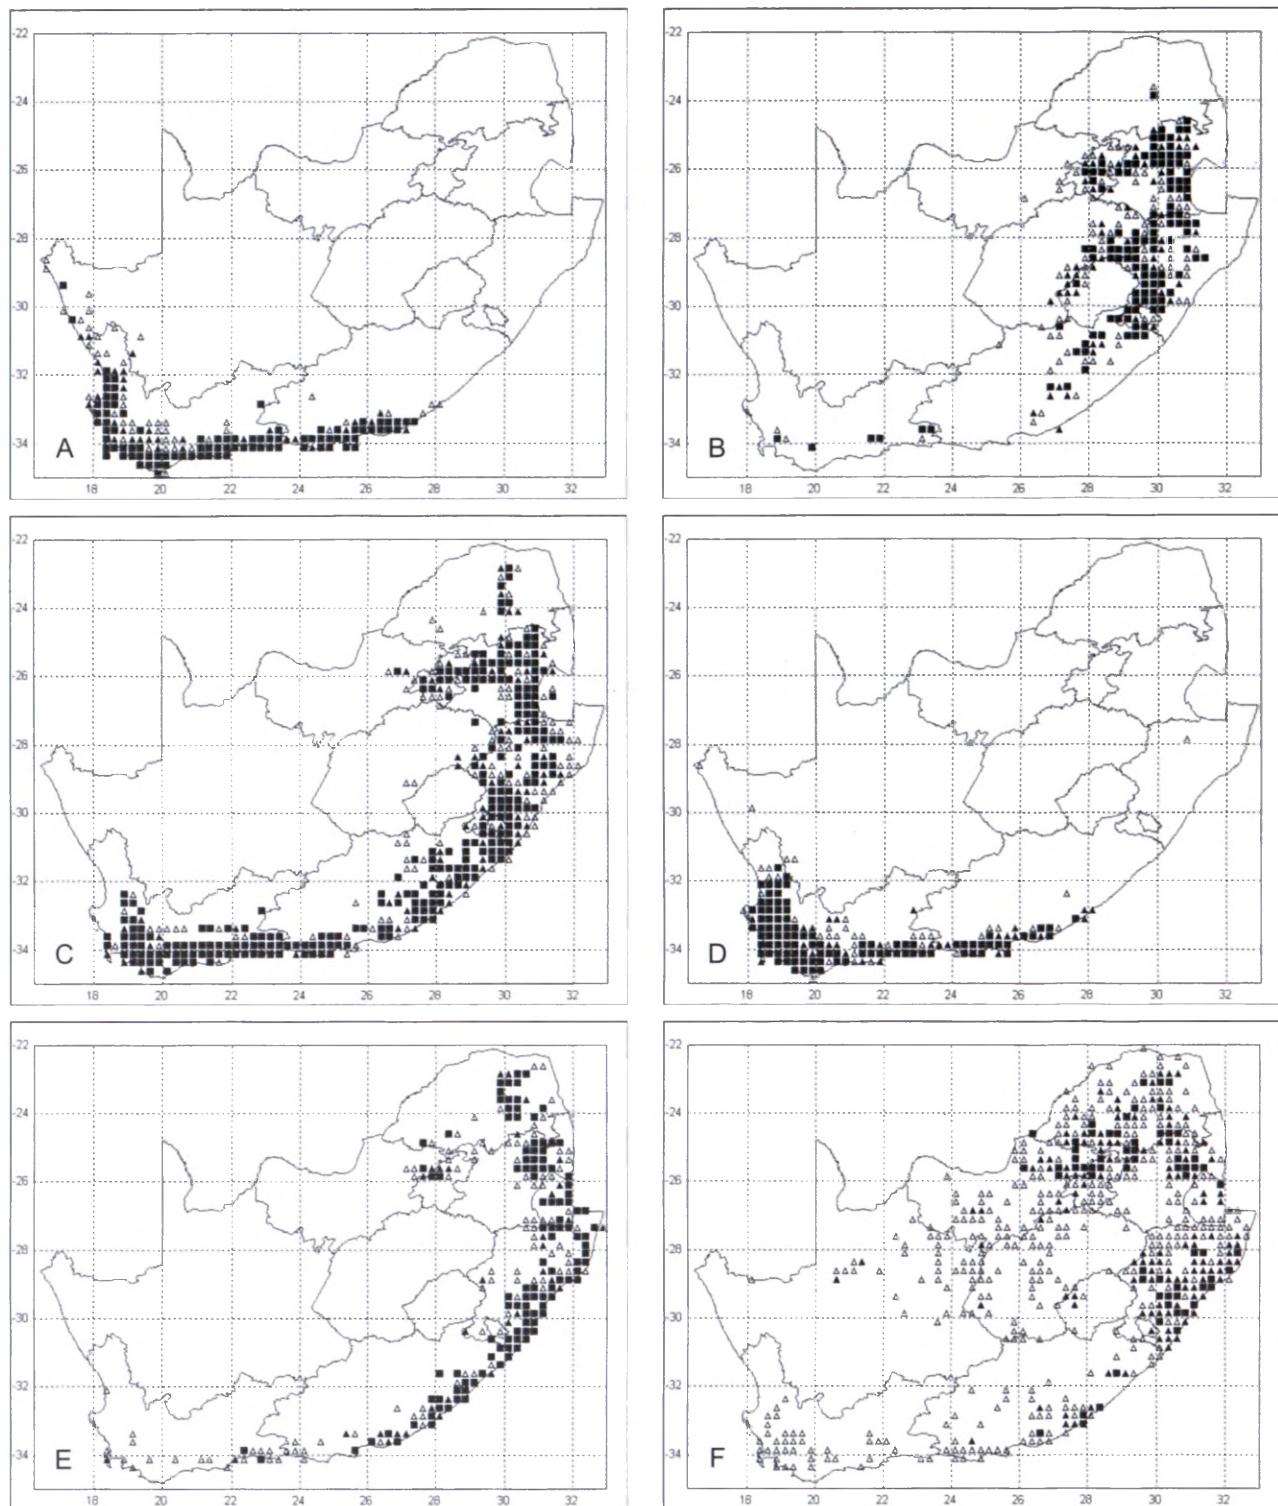

FIGURE 2.—Distribution and severity of invasion in study area: A, *Acacia cyclops*; B, *Acacia dealbata*; C, *Acacia mearnsii*; D, *Acacia saligna*; E, *Lantana camara*; F, *Melia azedarach*. Light invasion,  $\triangle$ ; moderate invasion,  $\blacktriangle$ ; heavy invasion,  $\blacksquare$ .

*guajava* (guava), *Eichhornia crassipes* (water hyacinth) and *Jacaranda mimosifolia* (jacaranda).

#### Fynbos Biome

Twenty species were the most prominent invaders in the Fynbos Biome (Appendix 2). *Acacia mearnsii* was the most prominent species with a prominence value of 31.5, followed by *A. saligna* and *A. cyclops* with values of 30.4 and 27.2, respectively. The remaining top ten most prominent invaders in order, were, *Pinus pinaster* (cluster pine), *Acacia melanoxylon* (Australian

blackwood), *A. longifolia* (long-leaved wattle), *Populus ×canescens* (grey poplar), *Paraserianthes lophantha* (stinkbean), *Rubus fruticosus* (European blackberry) and *Opuntia ficus-indica*. *Hakea sericea* (silky hakea) and *Pinus radiata* (radiata pine), both invaders of mountain fynbos, were most likely under-recorded because of the inaccessibility and under-sampling of this habitat.

#### Forest habitats

Forty species were the most prominent invaders in forest habitats (Appendix 2). *Chromolaena odorata* was

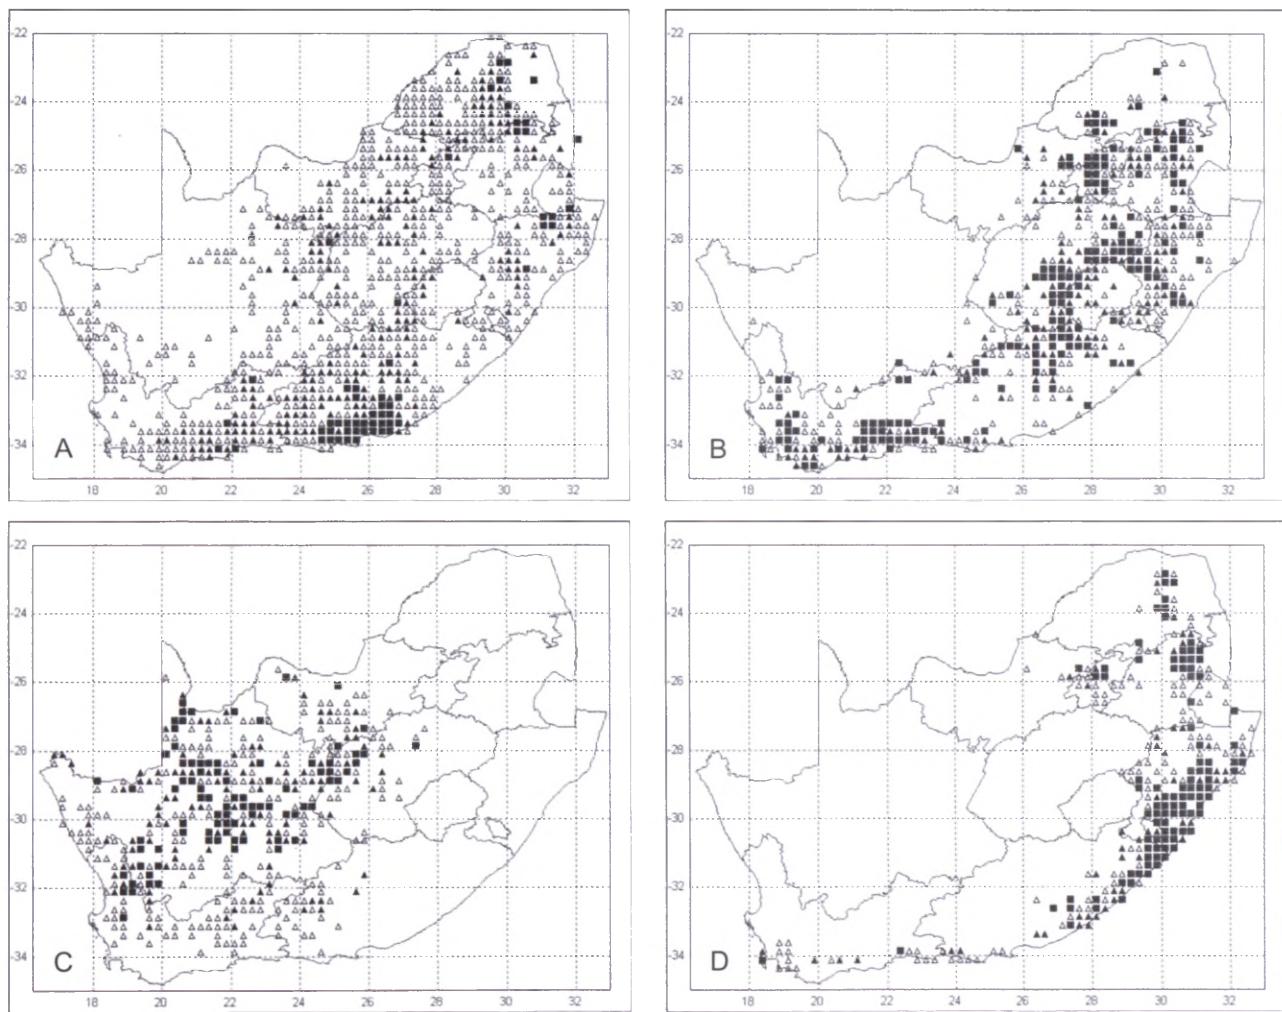

FIGURE 3.—Distribution and severity of invasion in study area: A, *Opuntia ficus-indica*; B, *Populus alba*/*xcanescens*; C, *Prosopis* spp.; D, *Solanum mauritianum*. Light invasion,  $\triangle$ ; moderate invasion,  $\blacktriangle$ ; heavy invasion,  $\blacksquare$ .

the most prominent species with a prominence value of 23.9, followed by *Solanum mauritianum* and *Acacia mearnsii* with values of 19 and 16.7, respectively. The remaining top ten prominent invaders were, in order, *Acacia melanoxylon*, *Lantana camara*, *Cestrum laevigatum* (inkberry), *Caesalpinia decapetala* (Mauritius/Mysore thorn), *Melia azedarach*, *Pinus pinaster* and *Psidium guajava*. *Pereskia aculeata* (pereskia) ranked eleventh and could have been vastly underestimated because of the difficulty of observing this forest canopy, climbing species.

#### Grassland Biome

Thirty-two species were the most prominent invaders in the Grassland Biome (Appendix 3). *Acacia mearnsii* was the most prominent species with a prominence value of 21.3, followed by *A. dealbata* and *Salix babylonica* (weeping willow) with values of 20.9 and 17.3, respectively. The remaining top ten most prominent invaders were, in order, *Populus alba*/*xcanescens* (white/grey poplars), *Solanum mauritianum*, *Rubus* spp. (mainly *R. cuneifolius*) (brambles), *Pyracantha angustifolia* and *P. crenulata* (yellow and Himalayan firethorns), *Eucalyptus* spp. (eucalypts), *Melia azedarach* and *Opuntia ficus-indica*. *Campuloclinium macrocephalum* (pompom weed) which did not feature as a prominent invader in this study showed an explosive rate of increase after

2000 and currently would be rated as one of the most prominent invaders in the Grassland Biome (Henderson *et al.* 2003).

#### Nama-Karoo Biome

Fourteen species were the most prominent invaders in the Nama-Karoo Biome (Appendix 3). *Prosopis* spp. (*P. glandulosa* var. *torreyana*, *P. velutina* and their hybrids) were the most prominent species with a prominence value of 60.6, followed by *Atriplex inflata* (sponge-fruit saltbush) and *Opuntia ficus-indica* with values of 21 and 14 respectively. The remaining top ten prominent invaders were, in order, *Salsola kali/tragus* (Russian tumbleweed), *Azolla filiculoides* (red water fern), *Nicotiana glauca* (wild tobacco), *Atriplex nummularia* (old man saltbush), *Schinus molle* (pepper tree), *Agave americana* (American agave) and *Solanum elaeagnifolium* (silverleaf bitter-apple).

#### Succulent Karoo Biome

Twelve species were the most prominent invaders in the Succulent Karoo Biome (Appendix 3). *Nicotiana glauca* was the most prominent invader with a prominence value of 26.8, followed by *Acacia cyclops* and *Prosopis* spp. (*P. glandulosa* var. *torreyana*, *P. velutina* and their hybrids) with values of 26.3 and 25.9, respec-

tively. The remaining top ten most prominent invaders were, in order, *Acacia mearnsii*, *A. saligna*, *Atriplex inflata*, *Arundo donax* (giant reed), *Atriplex nummularia*, *Opuntia ficus-indica* and *Populus ×canescens*.

### Riparian and wetland habitats

Fifty-five species had more than 50 records in riparian and wetland habitats (Appendix 4). *Salix babylonica* was the most frequently recorded riparian and wetland species with 1 323 records, followed by *Populus alba/×canescens* with 1 176 records and *Acacia mearnsii* with 953 records. The remaining top ten riparian and wetland invaders were, in order, *Melia azedarach*, *Ricinus communis*, *Arundo donax*, *Acacia dealbata*, *Sesbania punicea* (red sesbania), *Prosopis* spp. and *Nicotiana glauca*.

### Biome comparison

The Savanna Biome, which occupies the largest number of QDS (645) in the study area, had the greatest number of species (358) and the most invasion in terms of total abundance of all species (Table 2). The Fynbos Biome, however, which occupies the least QDS (139), was the most heavily invaded in terms of average abundance of all species per QDS, average abundance of individual species per QDS and % QDS heavily invaded. The Grassland Biome ranks third after Fynbos for total abundance of all species, followed by Forest, Nama-Karoo and the Succulent Karoo Biome was the least invaded.

### Biome profiles

Appendix 6 provides species characteristics of the prominent invasive species. Table 3 analyses the promi-

nent invasive species in each of the biomes and the study area in terms of region of origin, taxonomy, growth form, perennation, type of reproduction, dispersal mechanism and cultivated use.

*Savanna Biome* species are predominantly of tropical origin; members of the Fabaceae, Solanaceae, Asteraceae and Rosaceae; woody trees and shrubs, followed by herbs and climbers; perennial evergreen and evergreen/deciduous; seed-producers; water and bird dispersed; ornamentals and agricultural crops.

*Fynbos Biome* species are predominantly of temperate origin (particularly southern temperate); members of the Fabaceae, Myrtaceae, Pinaceae and Salicaceae; woody trees and shrubs; perennial evergreen; seed-producers; water, bird and wind dispersed; silvicultural crops, ornamentals and cover/binders.

*Forest habitat* species are predominantly of tropical origin; members of the Fabaceae, Asteraceae, Myrtaceae, Solanaceae, Pinaceae and Zingiberaceae; woody trees and shrubs, followed by herbs and climbers; perennial evergreen; seed-producers; bird and water dispersed; ornamentals, barriers and silvicultural crops.

*Grassland Biome* species are predominantly of northern temperate origin and the tropics; members of the Rosaceae, Fabaceae and Salicaceae; woody trees and shrubs, followed by herbs; perennial evergreen/deciduous and deciduous; seed-producers, but a greater percentage of species coppice and sucker than in other vegetation categories; water and bird dispersed; barriers, ornamentals and agricultural crops.

*Nama-Karoo Biome* species are predominantly of northern temperate origin and the tropics; members of the Chenopodiaceae, Salicaceae, Cactaceae, Fabaceae, Solanaceae and Tamaricaceae; woody trees and shrubs, followed by herbs and succulent trees and shrubs; perennial evergreen/deciduous and deciduous; seed-producers, but a greater percentage of species reproduce by vegetative division than in other vegetation categories; water and wind dispersed; agricultural crops and ornamentals.

*Succulent Karoo Biome* species are predominantly of temperate origin; members of the Fabaceae, Chenopodiaceae and Tamaricaceae; woody trees and shrubs; perennial evergreen and evergreen/deciduous; seed-producers and reproduce vegetatively by coppicing; water and wind dispersed; agricultural crops, ornamentals and cover/binders.

### DISCUSSION

#### Biome comparison: extent of invasion

No previous studies have enabled a direct comparison of the extent of invasion in the different biomes using the same parameters. This study reinforces previous studies that the Fynbos Biome is the most extensively invaded vegetation type in South Africa (Richardson *et al.* 1997) but it also shows that parts of Savanna and Grassland are

as heavily invaded as parts of the Fynbos. These findings have important implications for the management of alien plant invasions in South Africa. Without intervention we can expect invasion to increase in all parts of South Africa and particularly in the Grassland and Savanna Biomes where large areas are yet to be invaded and many species are only starting to invade.

### **Biome comparison: prominent invaders**

Each biome has a different suite of prominent invaders. In part, this can be explained by their pre-adaptation to the prevailing environmental conditions, but also to their history of planting. Most of these species were deliberately introduced and cultivated on a grand scale as silvicultural and agricultural crops e.g. *Acacia mearnsii*, *A. melanoxylon*, *Pinus pinaster* and species of *Prosopis*, as barriers e.g. *Acacia dealbata*, *Hakea sericea* and *Pyracantha angustifolia*, as cover/binders e.g. *Acacia cyclops*, *A. saligna* and *Populus ×canescens*, and ornamentals e.g. *Melia azedarach* and *Lantana camara*.

Some species which have become prominent invaders were not cultivated widely or on a grand scale e.g. *Solanum mauritianum*, *Chromolaena odorata* and *Nicotiana glauca*. Although the latter species have on occasion been cultivated as ornamentals they have managed to disperse very efficiently without human assistance—*C. odorata* by wind, *S. mauritianum* by birds and *N. glauca* by wind, soil and water.

Some species, although widely planted, have become prominent invaders in only one biome, indicating that environmental factors have limited their distribution. Examples are members of the family Rosaceae, such as *Pyracantha angustifolia*, *P. crenulata*, *Cotoneaster franchetii* and *C. pannosus* that are virtually restricted to high-altitude grasslands where it appears that freezing winter temperatures are needed to trigger seed germination (Henderson 1989). *Jacaranda mimosifolia* is another species that has been planted throughout South Africa yet is only invasive in the moister parts of the Savanna and Forest Biomes. In its native northeastern Argentina, *J. mimosifolia* occurs mainly on river banks under warmer-temperate, subhumid conditions (Poynton 1973)—environmental conditions which are similar to those in its naturalized range in southern Africa. A previous study by Henderson (2006b) showed that the current distributions of invasive plants in southern Africa are a reflection of the climatic zones of their origin.

There are considerable differences in the species profiles of the biomes but shared features are the prominence of the family Fabaceae, woody trees and shrubs, reproduction by seed and water dispersal. Within the Fabaceae the *Acacia* species are the most numerous with 17 listed species and account for a very large proportion of all plant invasion in South Africa. They are important invaders of all the major vegetation types except for those in the arid interior, where other leguminous invaders take over, namely species of *Prosopis*. The most widespread and abundant acacias are *Acacia mearnsii*, *A. cyclops* and *A. saligna*. *Acacia mearnsii* has invaded the widest range of vegetation types in South

Africa and is the most widespread riverine invader, occurring almost continuously from Louis Trichardt in the Limpopo Province down the eastern seaboard to Cape Town, a distance of ± 2 500 km. *Acacia cyclops* stretches along almost the entire Cape coastline from Port Nolloth in the northwest to beyond East London in the east, a distance exceeding 2 000 km. *Acacia saligna* stretches along the Cape coastline from Saldanha Bay in the west to the Kei River in the east, a distance of ± 1 500 km.

Sixty-eight per cent of prominent invaders are perennial trees or shrubs. There are only two grasses listed as prominent invaders and only 14 species as nonperennial (annual, biennial or variable). Grasses and herbaceous species are under-represented in the SAPIA database largely as a consequence of biased recording of the larger, more conspicuous species. In southern Africa the Poaceae is one of the largest plant families with 847 indigenous species and 115 (12%) naturalized species (Gibbs Russell *et al.* 1990). However, only 30 grass species are listed in this publication. There is definitely a lack of expertise in identifying grasses in South Africa and this is one of the reasons for the under-representation of alien grasses in weed surveys. There is similarly an under-representation of the alien herbaceous Asteraceae. The South African National Biodiversity Institute's online species checklist at <http://posa.sanbi.org/searchspp.php> lists 125 alien herbaceous species in South Africa, yet only 44 alien herbaceous species have been listed in this publication.

### **Comparison with other studies**

Versfeld *et al.* (1998) provide the only other assessment of the extent and importance of invasive plants on a national level. This study combined expert knowledge of local landowners and managers with existing databases such as those of provincial conservation authorities and national departments. The SAPIA database was used as a means of data verification particularly for areas where expert knowledge was lacking. Overall the assessment by Versfeld *et al.* (1998) relating to importance rankings and the distribution of dense infestations concurs with this study. Eight of the top ten invading species or groups of species, ranked by condensed invaded area, also appear within the top ten ranking in this study—these are: *Acacia cyclops*, *Prosopis* spp., *A. mearnsii*, *A. saligna*, *Solanum mauritianum*, *Opuntia* spp., *Melia azedarach* and *Lantana camara*. Versfeld *et al.* (1998) include *Pinus* spp. and *Hakea* spp. within the top ten ranking, whereas this study includes *Populus alba*/*×canescens* and *Acacia dealbata*. The lower ranking of *Pinus* spp. and *Hakea* spp. in this study can be explained by the under-sampling of mountain habitats, which are largely inaccessible by road, in which these species are invasive.

Abundance data presented in this study suggests that Versfeld *et al.* (1998) may have underestimated the area of invasion of *Salix babylonica* and *Populus alba*/*×canescens*. In the present study these species were not only the most frequently recorded invaders in riparian and wetland habitats but their total weighted abundance

was in both instances more than *Melia azedarach* and *Eucalyptus* spp. (Appendix 1) which were rated above *Salix* spp. and *Populus* spp. by Versfeld *et al.* (1998). Other riparian species which may also have been underestimated include *Arundo donax* (giant reed), *Morus alba* (common mulberry) and *Ricinus communis*.

### Looking to the future

#### *The Working for Water Programme (WfW) and biological control*

Alien plant invasion is a dynamic process and there will undoubtedly be changes in species composition and prominence of invaders in the future. Many of the large tree species—mainly *Acacia*, *Eucalyptus*, *Pinus*, *Populus*, *Prosopis* species and *Melia azedarach* have been targeted by a national clearing programme, Working for Water (WfW), which started in October 1995 (Marais *et al.* 2004). To date there has not been an assessment of the affects of the WfW programme on the status of invasive alien infestations. The programme has been proposed for 20 years but Marais *et al.* (2004) indicate that even with the existing generous levels of funding, it is unlikely that the problem will be contained within the next half century.

Biological control of invasive plants using introduced insects and pathogens is the only sustainable, effective and inexpensive solution to the most intractable of the invasive alien plant problems (Marais *et al.* 2004). When they are successful, the damage inflicted by biological control agents causes a decline in population densities, distribution and, or, rates of spread of invasive plants, and reduces the costs of other management practices (Zimmermann *et al.* 2004). There have been some outstanding successes with biocontrol in South Africa, dating back to the early and mid-1900s with *Opuntia monacantha* (drooping prickly pear) and *O. ficus-indica*, and in more recent years with several of the *Acacia* spp. (Zimmermann *et al.* 2004). Population monitoring of *A. saligna* in the Western Cape has shown marked decreases in population densities caused by the gall-forming rust fungus, *Uromycladium tepperianum* (Morris 1997; Wood & Morris 2007).

### New invaders

Since 2000 a further 45 species have been added to the SAPIA database for the study area (Appendix 5). Another eight species, two of which are indigenous to South Africa, are naturalized in neighbouring Zimbabwe and Malawi (Appendix 5). All but three of the additional species have been listed as weeds in *A global compendium of weeds* (Randall 2002) and 28 species are environmental weeds elsewhere in the world and therefore have the potential to become invasive in South Africa. Fourteen of the new species are ‘noxious weeds’ or restricted in California, Florida, Hawaii, New Zealand and Australia—places with similar climates and with which South Africa has many invasive species in common. We should be especially wary of these species which include some of the most damaging and costly invaders such as *Hydrilla verticillata* (hydrilla), a sub-

merged aquatic plant that has invaded much of the USA since the 1960s, and *Chondrilla juncea* (skeleton weed), a terrestrial herb that has become a major agricultural weed in the USA, Canada and Australia.

### CONCLUSION

The main objective of this paper was to provide a historical overview of the extent and species composition of alien plant invasion in southern Africa from 1979 until the end of 2000. This snapshot of invasion will provide a yardstick by which we can measure our progress or failure in the management of invasive alien plants in southern Africa.

This publication will also contribute to the global knowledge of invasive alien plants. One of the most useful predictors of invasiveness is whether a species is invasive elsewhere in the world (Richardson *et al.* 2004a). The lists of prominent invaders and other naturalized species provided here will serve as a warning to neighbouring countries and to those as far afield as Australia, New Zealand and the USA of potentially invasive species in their regions.

The results presented here are but a summary of the more than 50 000 records of invasive alien plants in the SAPIA database. Much more can be gleaned from the SAPIA data. SAPIA has provided the raw data for analyses that have been used to prioritize invasive alien species for management (Robertson *et al.* 2003; Nel *et al.* 2004), to map the potential spread of invasive plants (Rouget *et al.* 2004), to look at broad-scale distribution patterns of invasive species (Richardson *et al.* 2004b), to correlate patterns of alien plant species richness with the environment and indigenous species richness (Richardson *et al.* 2005), to correlate patterns of invasion with interactions between environment, species traits and human uses (Thuiller *et al.* 2006) and to look at potential range and residence time (Wilson *et al.* 2007). SAPIA has also played a crucial role in providing information on invasive plants for the revision of the Conservation of Agricultural Resources Act, Act 43 of 1983, and the drafting of the National Environmental Management: Biodiversity Act, Act 10 of 2004.

Alien plant invasion is a dynamic process and therefore it is essential that the SAPIA database be kept up-to-date with current information. From October 2006 a second phase of the SAPIA mapping project was launched and all the SAPIA data will be available online at the Weeds and Invasive Plants (WIP) website, [www.agis.agric.za/wip](http://www.agis.agric.za/wip) (Henderson 2006a).

### ACKNOWLEDGEMENTS

I thank all the people who have contributed in many different ways to the compilation of the SAPIA database and have made it one of the most comprehensive databases on invasive alien plants in southern Africa. Les Powrie and Mike Rutherford of the South African National Biodiversity Institute are thanked for the QDS

coverage of the biomes of South Africa which was used to subdivide the SAPIA dataset into the six biome datasets for this publication. Special tribute is made to Mike Wells of the Botanical Research Institute for his inspiration and mentorship during the development of roadside survey techniques from 1979 to the mid-1980s, and to Helmuth Zimmermann of the Plant Protection Research Institute for his motivation and support of the SAPIA mapping project. SAPIA is an initiative of the Agricultural Research Council (ARC): Plant Protection Research Institute which has provided the infrastructure, basal funding and support since the mid 1980s to the present. External funding of SAPIA has been gratefully received from the Departments of Agriculture, Environmental Affairs and Tourism, and Water Affairs and Forestry (Working for Water Programme).

#### APPENDIX 5.—Species checklist

The following 601 naturalized and casual alien (#) plant species were catalogued in the SAPIA database up to May 2006. Accepted names in roman type. Synonyms in italics. \*, taxa added to SAPIA after 2000; †, taxa recorded only in Zimbabwe and Malawi. PRE, species records from the Pretoria National Herbarium

Acacia	var. <i>expansa</i> ( <i>Jacobi</i> ) <i>Gentry</i> (= <i>A. expansa</i> <i>Jacobi</i> ), Agavaceae, spreading century plant
<i>baileyana</i> <i>F.Muell.</i> , Fabaceae, Bailey's wattle	decipiens <i>Baker</i> (= <i>A. laxifolia</i> <i>Baker</i> ), Agavaceae, false sisal #
<i>cultiformis</i> <i>A.Cunn. ex G.Don</i> , Fabaceae, knife-leaved wattle #	<i>sisalana</i> <i>Perrine</i> , Agavaceae, sisal
<i>cyclops</i> <i>A.Cunn. ex G.Don</i> , Fabaceae, red eye	sp., Agavaceae
<i>dealbata</i> <i>Link</i> , Fabaceae, silver wattle	
<i>decurrans</i> <i>Willd.</i> , Fabaceae, green wattle	
<i>elata</i> <i>A.Cunn. ex Benth.</i> ( <i>A. terminalis</i> ( <i>Salisb.</i> ) <i>J.F.Macbr.</i> misapplied in South Africa), Fabaceae, peppertree wattle	
<i>fimbriata</i> <i>A.Cunn. ex G.Don</i> , Fabaceae, fringed wattle	
<i>implexa</i> <i>Benth.</i> , Fabaceae, hickory wattle	
<i>longifolia</i> ( <i>Andrews</i> ) <i>Willd.</i> , Fabaceae, long-leaved wattle	
<i>mearnsii</i> <i>De Wild.</i> , Fabaceae, black wattle	
<i>melanoxylon R.Br.</i> , Fabaceae, Australian blackwood	
<i>paradoxa DC.</i> (= <i>A. armata R.Br.</i> ), Fabaceae, kangaroo thorn	
<i>podalyriifolia A.Cunn. ex G.Don</i> , Fabaceae, pearl acacia	
<i>pycnantha Benth.</i> , Fabaceae, golden wattle	
<i>saligna</i> ( <i>Labill.</i> ) <i>H.L.Wendl.</i> (= <i>A. cyanophylla</i> <i>Lindl.</i> ), Fabaceae, Port Jackson willow	
<i>stricta</i> ( <i>Andrews</i> ) <i>Willd.</i> , Fabaceae, hop wattle ??, *2004	
<i>viscidula Benth.</i> , Fabaceae, sticky wattle	
Acanthocereus ?tetragonus ( <i>L.</i> ) <i>Hummelinck</i> , Cactaceae, barbed-wire cactus	
Acanthospermum	
<i>australe</i> ( <i>Loefl.</i> ) <i>Kuntze</i> (= <i>A. brasiliense</i> <i>Schrank</i> ), Asteraceae, eight-seeded prostrate starbur	
<i>hispidum DC.</i> , Asteraceae, upright starbur	
Acanthus polystachyus <i>Delile</i> var. <i>pseudopubescens</i> <i>Cufod.</i> (= <i>A. pubescens</i> <i>Engl.</i> ), Acanthaceae, bear's breeches #	
Acer	
<i>buergerianum Miq.</i> , Aceraceae, Chinese maple, *2003 #	
<i>negundo L.</i> (= <i>A. californicum</i> <i>D.Dietr.</i> ), Aceraceae, ash-leaved maple	
? sp., Aceraceae, ?red-leaved maple	
Achyranthes aspera <i>L.</i> (= <i>A. argentea</i> <i>Lam.</i> ), Amaranthaceae, burweed	
<i>Acorus calamus L.</i> , Acoraceae, calamus	
Acroporus fraxinifolius <i>Wight ex Arn.</i> , Fabaceae, shingle tree #	
Adiantum raddianum <i>C.Presl</i> , Adiantaceae, maidenhair fern #	
Agave	
<i>americana L.</i>	var. <i>americana</i> , Agavaceae, American agave
	hybridus <i>L.</i> , Amaranthaceae, pigweed
	sp., Amaranthaceae
Amaranthus	
hybridus <i>L.</i> , Amaranthaceae, pigweed	
sp., Amaranthaceae	
Ambrosia artemisiifolia <i>L.</i> , Asteraceae, annual ragweed	
Ammi majus <i>L.</i> (= <i>A. glaucifolium</i> <i>L.</i> ), Apiaceae, bishop's weed	
Anigozanthos flavidus <i>DC.</i> , Haemodoraceae, yellow kangaroo paw #	
Anredera cordifolia ( <i>Ten.</i> ) <i>Steenis</i> , ( <i>A. baselloides</i> ( <i>Kunth</i> ) <i>Baill.</i> misapplied in South Africa), Basellaceae, bridal wreath	

## APPENDIX 5.—Species checklist (cont.)

Antigonon leptopus Hook. & Arn., Polygonaceae, coral creeper	
Apium graveolens L., Apiaceae, wild celery	
Araucaria sp., Araucariaceae, monkey puzzle tree, *2003 #	
bidwillii Hook., Araucariaceae, bunya-bunya, *2005 #	
Araujia sericifera Brot., Asclepiadaceae, moth catcher	
Ardisia crenata Sims (A. crispa (Thunb.) A.DC. misapplied in South Africa), Myrsinaceae, coralberry tree	
elliptica Thunb. (= A. humilis Vahl), Myrsinaceae, shoebottom ardisia, *2005 #	
Argemone mexicana L., Papaveraceae, yellow-flowered Mexican poppy	
ochroleuca Sweet subsp. ochroleuca, Papaveraceae, white-flowered Mexican poppy	
sp., Papaveraceae	
Aristolochia elegans Mast., Aristolochiaceae, calico flower	
Arundo donax L., Poaceae, giant reed	
Astartea fascicularis (Labill.) DC., Myrtaceae #	
Atriplex inflata F.Muell. (= A. lindleyi Moq. subsp. <i>inflata</i> (F.Muell.) Paul G.Wilson), Chenopodiaceae, sponge-fruit saltbush	
muelleri Benth., Chenopodiaceae, Mueller's saltbush	
nummularia Lindl. subsp. nummularia, Chenopodiaceae, old-man saltbush	
semibaccata R.Br., Chenopodiaceae, Australian saltbush	
sp., Chenopodiaceae	
Azolla filiculoides Lam., Azollaceae, red water fern	
?pinnata R.Br. subsp. asiatica R.M.K.Saunders & K.Fowler (= A. imbricata (Roxb. ex Griff.) Nakai), Azollaceae, mosquito fern	
sp., Azollaceae	
Baeckia sp., Myrtaceae #	
Bambusa balcooa Roxb., Poaceae, common bamboo	
sp. with tall yellow stems and green leaves, Poaceae, bamboo	
Bambuseae sp., Poaceae, bamboo	
Banksia ericifolia L.f., Proteaceae, heath banksia #	
integrifolia L.f., Proteaceae, coast banksia #	
Bauhinia purpurea L., Fabaceae, butterfly orchid tree	
sp., Fabaceae	
variegata L., Fabaceae, orchid tree	
Begonia cucullata Willd. (= B. semperflorens Link & Otto), Begoniaceae, begonia #	
Bidens bipinnata L., Asteraceae, Spanish black jack	
biternata (Lour.) Merr. & Sherff, Asteraceae, five-leaved black jack	
pilosa L., Asteraceae, black jack	
Billardiera heterophylla (Lindl.) L.W.Cayzer & Crisp (= Sollya heterophylla Lindl.), Pittosporaceae, bluebell creeper #	
Boerhavia erecta L., Nyctaginaceae, erect boerhavia	
Bougainvillea glabra Choisy, Nyctaginaceae, bougainvillea, *2004 #	
Brachychiton populneus (Schott & Endl.) R.Br., Sterculiaceae, kurrajong, *2006 #	
Briza maxima L. (= B. major K.Presl), Poaceae, quaking grass	
Bromus catharticus Vahl (= B. unioloides Kunth, B. willdenowii Kunth), Poaceae, rescue grass	
diandrus Roth, Poaceae, ripgut brome	
pectinatus Thunb. (= B. adonis Hochst. ex Steud.), Poaceae, Japanese brome	
Brugmansia ×candida Pers., (= Datura candida (Pers.) Saff.), Solanaceae, moonflower bush	
Bryophyllum delagoense (Eckl. & Zeyh.) Schinz (= Kalanchoe tubiflora (Harv.) Raym.-Hamet), Crassulaceae, chandelier plant	
pinnatum (Lam.) Oken (= Kalanchoe pinnata (Lam.) Pers.), Crassulaceae, green mother of millions, *2005 ?naturalized	
proliferum Bowie ex Hook. (= Kalanchoe prolifera (Bowie ex Hook.) Raym.-Hamet, Crassulaceae, *2005 ?naturalized	
Buddleja davidii Franch., Buddlejaceae, Chinese sagewood, *2004 ?naturalized	
?Buddleja madagascariensis Lam., Buddlejaceae, Madagascar sage-wood #	
Caesalpinia decapetala (Roth) Alston (= C. sepiaria Roxb.), Fabaceae, Mauritius thorn	
gilliesii (Hook.) D.Dietr., Fabaceae, bird-of-paradise	
pulcherrima (L.) Sw., Fabaceae, pride of barbados, *2004 #	
Callisia repens (Jacq.) L., Commelinaceae, creeping inch plant, *2006 #	
Callistemon citrinus (Curtis) Skeels, Myrtaceae, crimson bottlebrush #	
glaucus (Curtis) Sweet (= C. speciosus auct.), Myrtaceae, Albany bottlebrush #	
rigidus R.Br., Myrtaceae, stiff bottlebrush	
sp., Myrtaceae	
viminalis (Sol. ex Gaertn.) G.Don, Myrtaceae, weeping bottlebrush	
Calotropis procera (Aiton) W.T.Aiton (= Asclepias procera Aiton), Asclepiadaceae, madar #	
Campuloclinium macrocephalum (Less.) DC. (= Eupatorium macrocephalum Less.), Asteraceae, pom pom weed	
Canna glauca L., Cannaceae, yellow-flowered glaucous canna #	
indica L. (= C. edulis Ker Gawl.), Cannaceae, Indian canna	
sp., Cannaceae	
×generalis L.H.Bailey, Cannaceae, garden canna	
Capsella bursa-pastoris (L.) Medik., Brassicaceae, shepherd's purse	
Cardiospermum grandiflorum Sw., Sapindaceae, balloon vine	
halicacabum L., Sapindaceae, heart pea	
Carica papaya L. (= Papaya carica Gaertn.), Caricaceae, pawpaw	
Castanea dentata (Marshall) Borkh., Fagaceae, American chestnut ??#	
Castanospermum australe A.Cunn. & C.Fraser ex Hook., Fabaceae, Australian chestnut ?naturalized	
Casuarina cunninghamiana Miq., Casuarinaceae, beefwood	
equisetifolia L., Casuarinaceae, horsetail tree	
Catharanthus roseus (L.) G.Don (= Lochnera rosea (L.) Rchb., Vinca rosea L.), Apocynaceae, Madagascar periwinkle	
Cedrus deodara (Roxb. ex D.Don) G.Don, Pinaceae, deodar ??#	
Celtis australis L., Ulmaceae, European hackberry ?naturalized	
occidentalis L., Ulmaceae, common hackberry ?naturalized	
sensis Pers., Ulmaceae, Chinese nettle tree	
Cenchrus brownii Roem. & Schult. (= C. viridis Spreng.), Poaceae, fine burgrass	
Centranthus ruber (L.) DC., Valerianaceae, red valerian ?naturalized	
Cereus jamaicensis DC. (C. peruvianus (L.) Mill. misapplied in South Africa), Cactaceae, queen of the night	
Cestrum aurantiacum Lindl., Solanaceae, yellow or orange cestrum	
elegans (Bronn.) Schltdl. (= C. purpureum (Lindl.) Standl.), Solanaceae, crimson cestrum	
laevigatum Schltdl., Solanaceae, inkberry	
parqui L'Hér., Solanaceae, Chilean cestrum	
sp., Solanaceae	
Chamaesyce prostrata (Aiton) Small (= Euphorbia prostrata Aiton), Euphorbiaceae, hairy creeping milkweed	
serpens (Kunth) Small (= Euphorbia serpens Kunth), Euphorbiaceae, milkweed	
Chenopodium album L., Chenopodiaceae, white goosefoot	
Chondrilla juncea L., Asteraceae, skeletonweed, *2003 #	
Chorizema cordatum (L.) Fabaceae, Australian flame pea #	
Chromolaena odorata (L.) R.M.King & H.Rob. (= Eupatorium odoratum L.), Asteraceae, trifid weed	
Cichorium intybus L., Asteraceae, chicory	
Cinnamomum camphora (L.) J.Presl, Lauraceae, camphor tree	
Cirsium arvense (L.) Scop., Asteraceae, Canada thistle	
vulgare (Savi) Ten. (= C. lanceolatum (L.) Scop.), Asteraceae, spear thistle	
Cissus antarctica Vent., Vitaceae, kangaroo vine, *2002 #	
Citrus limon (L.) Burm.f. (= C. limonum Risso), Rutaceae, lemon	
sp., Rutaceae	
Clusia rosea Jacq., Clusiaceae, balsam fig/apple, *2003 #	
Coffea arabica L., Rubiaceae, arabica coffee, †Zimbabwe # abundant locally	
Coix lacryma-jobi L., Poaceae, Job's tears	
Colocasia esculenta (L.) Schott, Araceae, elephant's ear	

## APPENDIX 5.—Species checklist (cont.)

Commelinia benghalensis L., Commelinaceae, Benghal wandering Jew	Eucalyptus
Convolvulus arvensis L., Convolvulaceae, field bindweed	camaldulensis Dehnh., Myrtaceae, red river gum
Conyza	cineraria F.Muell. ex Benth., Myrtaceae, florist's gum
bonariensis (L.) Cronquist (= <i>Erigeron bonariensis</i> L.), Asteraceae, flax-leaf fleabane	cladocalyx F.Muell., Myrtaceae, sugar gum
canadensis (L.) Cronquist (= <i>Erigeron canadensis</i> L.), Asteraceae, horseweed fleabane	cloeziana F.Muell., Myrtaceae, iron gum
prunulifolia (Lam.) Cuatrec. & Lourteig (= <i>C. chilensis</i> Spreng.), Asteraceae, Chilean fleabane	confernumata D.J.Carr & S.G.M.Carr ( <i>E. lemannii</i> (Schauer) Benth. misapplied in South Africa), Myrtaceae, bald island marlock or 'spider gum'
sp., Asteraceae	diversicolor F.Muell., Myrtaceae, karri
sumatrensis (Retz.) E.Walker (= <i>C. albida</i> Willd. ex Spreng.), Asteraceae, tall fleabane	?exserta F.Muell., Myrtaceae, Queensland peppermint
Coreopsis lanceolata L., Asteraceae, tickseed	fastigata H.Deane & Maiden, Myrtaceae, cut-tail gum
Cortaderia	globulus Labill., Myrtaceae, blue gum
jubata (Lemoine ex Carrière) Stapf, Poaceae, purple Pampas grass	gomphophocephala DC., Myrtaceae, tuart
selloana (Schult.) Asch. & Graebn., Poaceae, common Pampas grass	grandis W.Hill ex Maiden ( <i>E. saligna</i> Sm. misapplied in South Africa), Myrtaceae, saligna gum
Corymbia ficifolia (F.Muell.) K.D.Hill & L.A.S.Johnson (= <i>Eucalyptus ficifolia</i> F.Muell.), Myrtaceae, red flowering gum #	leucoxylon F.Muell., Myrtaceae, white ironbark ?#
Cosmos bipinnatus Cav. (= <i>Bidens formosa</i> (Bonato) Sch. Bip.), Asteraceae, cosmos	microcorys F.Muell., Myrtaceae, tallow gum
Cotoneaster	microtheca F.Muell., Myrtaceae, coolabah
coriaceus Franch. (= <i>C. lacteus</i> W.W.Sm.), Rosaceae #	paniculata Sm., Myrtaceae, grey ironbark
franchetii Bois, Rosaceae, orange cotoneaster	regnans F.Muell., Myrtaceae, mountain ash
glaucocephalus Franch., Rosaceae, late cotoneaster	robusta Sm., Myrtaceae, swamp mahogany gum ?#
pannosus Franch., Rosaceae, silver-leaf cotoneaster	sideroxylon A.Cunn ex Woolls, Myrtaceae, black ironbark ?#
sp., Rosaceae	sp., Myrtaceae
Crataegus	tereticornis Sm., Myrtaceae, forest red gum ?#
sp., Rosaceae #	Eugenia uniflora L., Myrtaceae, pitanga
×lavallei Hérincq (= <i>C. carrierei</i> Vauvel ex Carrière), Rosaceae, Lavallée thorn	Euphorbia
Crotalaria agatiflora Schweinf. subsp. agatiflora, Fabaceae, canary-bird bush	heterophylla L. (= <i>E. geniculata</i> Ortega), Euphorbiaceae, annual poinsettia
Cryptomeria japonica (L.f.) D.Don, Cupressaceae, Japanese cedar #	leucocephala Lotsy, Euphorbiaceae, white poinsettia, *2005 naturalized
Cryptostegia grandiflora R.Br., Asclepiadaceae, rubber vine	peplus L., Euphorbiaceae, stinging milkweed
Cuphea ignea A.DC., Lythraceae, cigarette bush #	pulcherrima Willd. ex Klotzsch (= <i>Poinsettia pulcherrima</i> (Willd. ex Klotzsch) Graham), Euphorbiaceae, poinsettia ?#
Cupressus	Euryops chrysanthemoides (DC.) B.Nord., Asteraceae, †Zimbabwe # but indigenous in South Africa
arizonica Greene (= <i>C. glabra</i> Sudw.), Cupressaceae, Arizona cypress	Fallopia
lusitanica Mill. (= <i>C. lindleyi</i> Klotzsch ex Endl.), Cupressaceae, Mexican cypress	convolvulus (L.) Å.Löve (= <i>Bilderdykia convolvulus</i> (L.) Dumort), Polygonaceae, climbing knotweed
sp., Cupressaceae	sachalinensis (F.Schmidt) Ronse Decr. (= <i>Polygonum sachalinense</i> F.Schmidt, <i>Reynoutria sachalinensis</i> (F.Schmidt) Nakai), Polygonaceae, giant knotweed, *2005 (PRE 1980) naturalized
Cuscuta	Ficus
campestris Yunck., Convolvulaceae, common dodder	carica L., Moraceae, fig
suaveolens Ser., Convolvulaceae, lucerne dodder	elastica Roxb. ex Hornem. (= <i>F. decora</i> hort.), Moraceae, rubber fig #
Cyathea cooperi (Hook. ex F.Muell.) Domin (= <i>Sphaeropteris cooperi</i> (Hook. ex F. Muell.) R.M.Tryon), Cyatheaceae, Australian tree fern, *2005 #	macrophylla Desf. ex Pers., Moraceae, Australian banyan #
Cydonia oblonga Mill. (= <i>C. vulgaris</i> Pers.), Rosaceae, quince	pumila L., Moraceae, tickey creeper
Cytisus scoparius (L.) Link (= <i>Genista scoparia</i> (L.) Lam.), Fabaceae, Scotch broom	Flaveria bidentis (L.) Kuntze (= <i>F. contrayerba</i> (Cav.) Pers.), Asteraceae, smelter's bush
Dahlia spp., Asteraceae, garden dahlias ?naturalized	Foeniculum vulgare Mill., Apiaceae, fennel
Datura	Fraxinus
ferox L., Solanaceae, large thorn apple	americana L., Oleaceae, American ash
innoxia Mill. (D. metel L. misapplied in South Africa), Solanaceae, downy thorn apple	angustifolia Vahl, Oleaceae, Algerian ash
sp., Solanaceae	sp., Oleaceae
stramonium L., Solanaceae, common thorn apple	Fuchsia sp., Onagraceae, fuchsia #
Delonix regia (Bojer ex Hook.) Raf. (= <i>Poinciana regia</i> Bojer ex Hook.), Fabaceae, flamboyant	Fumaria muralis Sond. ex Koch, Fumariaceae, wall fumitory, *2001 #
Desmanthus virgatus (L.) Willd. (= <i>D. depressus</i> Humb. & Bonpl. ex Willd.), Fabaceae, ground tamarind	Genista monspessulana (L.) L.A.S.Johnson (= <i>Cytisus candicans</i> (L.) DC., <i>C. monspessulanus</i> L.), Fabaceae, Montpellier broom
Desmodium uncinatum (Jacq.) DC., Fabaceae, silverleaf desmodium, †Zimbabwe # abundant locally	Glandularia
Dracocephalum canariense L. (= <i>Cedronella canariensis</i> (L.) Webb & Berthel.), Lamiaceae, hortela de burro	aristigera (S.Moore) Tronc. (= <i>Verbena tenuisecta</i> Briq.), Verbenaceae, fine-leaved verbena
Duranta erecta L. (= <i>D. repens</i> L., <i>D. plumieri</i> Jacq.), Verbenaceae, forget-me-not-tree	×hybrida (hort. ex Groenl. & Rümpler) G.L.Nesom & Pruski (= <i>Verbena ×hybrida</i> hort. ex Groenl. ex Rümpler), Verbenaceae, garden verbena ?#
Dysphania ambrosioides (L.) Mosyakin & Clements (= <i>Chenopodium ambrosioides</i> L.), Chenopodiaceae, American goosefoot	Glebionis coronaria (L.) Cass. ex Spach (= <i>Chrysanthemum coronarium</i> L.), Asteraceae, chrysanthemum greens
Echinopsis spachiana (Lem.) Friedrich & G.D.Rowley (= <i>Trichocereus spachianus</i> (Lem.) Riccob.), Cactaceae, torch cactus	Gleditsia triacanthos L., Fabaceae, honey locust
Echium	Glyceria maxima (Hartm.) Holmb. (= <i>G. aquatica</i> (L.) Wahlb., <i>Poa aquatica</i> L.), Poaceae, reed meadow grass, *2002 #
plantagineum L. (= <i>E. lycopsis</i> L.), Boraginaceae, Patterson's curse	Gmelina arborea Roxb., Verbenaceae, white teak, †Malawi # abundant locally
vulgare L., Boraginaceae, blue echium	Gnaphalium luteoalbum L. (= <i>Pseudognaphalium luteoalbum</i> (L.) Hilliard & B.L.Burtt), Asteraceae, Jersey cudweed
Egeria densa Planch. (= <i>Elodea densa</i> (Planch.) Casp.), Hydrocharitaceae, dense water weed	Gomphrena celosioides Mart. (= <i>G. decumbens</i> Jacq.), Amaranthaceae, prostrate globe amaranth
Eichhornia crassipes (Mart.) Solms, Pontederiaceae, water hyacinth	Grevillea
Eragrostis pilosa (L.) P.Beauv., Poaceae, Indian love grass	banksii R.Br., Proteaceae, Bank's grevillea, *2004 # very abundant locally
Eriobotrya japonica (Thunb.) Lindl., Rosaceae, loquat	robusta A.Cunn. ex R.Br., Proteaceae, Australian silky oak
	rosmarinifolia A.Cunn., Proteaceae #
	sericea (Sm.) R.Br., Proteaceae, pink spider flower #
	Guilleminea densa (Humb. & Bonpl. ex Schult.) Moq. (= <i>Brayulinea densa</i> (Willd.) Small), Amaranthaceae, carrot weed

## APPENDIX 5.—Species checklist (cont.)

Hakea	sinense <i>Lour.</i> , Oleaceae, Chinese privet
drupacea ( <i>C.F.Gaertn.</i> ) <i>Roem. &amp; Schult.</i> (= <i>H. suaveolens</i> <i>R.Br.</i> ), Proteaceae, sweet hakea	sp., Oleaceae
gibbosa ( <i>Sm.</i> ) <i>Cav.</i> , Proteaceae, rock hakea	vulgare <i>L.</i> , Oleaceae, common privet
salicifolia ( <i>Vent.</i> ) <i>B.L.Burtt</i> (= <i>H. saligna</i> ( <i>Andrews</i> ) <i>Knight</i> ), Proteaceae, willow hakea	Lilium formosanum <i>Wallace</i> (= <i>L. longiflorum</i> <i>Thunb.</i> var. <i>formosanum</i> <i>Baker</i> , <i>L. philippinense</i> <i>Baker</i> ), Liliaceae, Saint Joseph's lily
sericea <i>Schrad.</i> & <i>J.C.Wendl.</i> , Proteaceae, silky hakea	<i>Limonium sinuatum</i> ( <i>L.</i> ) <i>Mill.</i> (= <i>Statice sinuata</i> <i>L.</i> ), Plumbaginaceae, statice
victoriae <i>J.Drumm.</i> , Proteaceae #	Linaria
Harrisia martinii ( <i>Labour.</i> ) <i>Britton &amp; Rose</i> (= <i>Eriocereus martinii</i> ( <i>Labour.</i> ) <i>Riccob.</i> ), Cactaceae, harrisia	<i>genistifolia</i> ( <i>L.</i> ) <i>Mill.</i> (= <i>L. dalmatica</i> ( <i>L.</i> ) <i>Mill.</i> ), Scrophulariaceae, yellow linaria
Hedera helix <i>L.</i> subsp. <i>canariensis</i> ( <i>Willd.</i> ) <i>Cout.</i> , Araliaceae, Algerian or Canary ivy, *2003 #	<i>maroccana</i> <i>Hook.f.</i> , Scrophulariaceae, baby snapdragon
Hedychium	Litsea glutinosa ( <i>Lour.</i> ) <i>C.B.Rob.</i> (= <i>L. sebifera</i> <i>Pers.</i> ), Lauraceae, Indian laurel
coccineum <i>Buch.-Ham. ex Sm.</i> , Zingiberaceae, red ginger lily	Lonicera japonica <i>Thunb.</i> 'Halliana', Caprifoliaceae, Japanese honey- suckle
coronarium <i>J.König</i> , Zingiberaceae, white ginger lily	Lygodium japonicum ( <i>Thunb.</i> ) <i>Sw.</i> , Schizaeaceae, Japanese climbing fern #
flavescens <i>Carey ex Roscoe</i> , Zingiberaceae, yellow ginger lily	Lythrum salicaria <i>L.</i> , Lythraceae, purple loosestrife
gardnerianum <i>Sheppard ex Ker Gawl.</i> , Zingiberaceae, kahili ginger lily	Macfadyena unguis-cati ( <i>L.</i> ) <i>A.H.Gentry</i> , Bignoniacae, cat's claw creeper
sp., Zingiberaceae	Maireana brevifolia ( <i>R.Br.</i> ) <i>Paul G.Wilson</i> (= <i>Kochia brevifolia</i> <i>R.Br.</i> ), Chenopodiaceae, small-leaf bluebush #
Helianthus annuus <i>L.</i> , Asteraceae, common sunflower	Malus pumila <i>Mill.</i> var. <i>paradisiaca</i> <i>C.K.Schneid.</i> , Rosaceae, paradise apple ??
Heliotropium amplexicaule <i>Vahl</i> , Boraginaceae, blue heliotrope	Malva
Hibiscus trionum <i>L.</i> , Malvaceae, bladderweed	<i>dendromorpha</i> <i>M.F.Ray</i> (= <i>Lavatera arborea</i> <i>L.</i> ), Malvaceae, tree mallow
Homalanthus populifolius <i>Graham</i> , Euphorbiaceae, Queensland poplar	<i>linnaei</i> <i>M.F.Ray</i> (= <i>Lavatera cretica</i> <i>L.</i> ), Malvaceae, Cretan holly- hock
Hordeum murinum <i>L.</i> , Poaceae, wild barley	<i>parviflora</i> <i>L.</i> , Malvaceae, small mallow
Hydrilla verticillata ( <i>L.f.</i> ) <i>Royle</i> , Hydrocharitaceae, hydrilla, *2006 (PRE 1963 but misidentified) naturalized and very abundant at Pongolapoort Dam, KwaZulu-Natal	Malvastrum coronandelianum ( <i>L.</i> ) <i>Garcke</i> , Malvaceae, prickly malvastrum
Hydrocotyle ranunculoides <i>L.f.</i> , Apiaceae, †Zimbabwe # abundant locally	Mangifera indica <i>L.</i> , Anacardiaceae, mango
Hylocereus undatus ( <i>Haw.</i> ) <i>Britton &amp; Rose</i> , Cactaceae, night-blooming cereus	Manihot
Hypericum	<i>esculenta</i> <i>Crantz</i> (= <i>M. utilissima</i> <i>Pohl</i> ), Euphorbiaceae, bitter cassava
patulum <i>Thunb.</i> (= <i>H. patulum</i> var. <i>forrestii</i> <i>Chitt.</i> ), Clusiaceae	<i>grahamii</i> <i>Hook.</i> (= <i>M. dulcis</i> ( <i>J.F.Gmel.</i> ) <i>Pax</i> var. <i>multifida</i> ( <i>Graham</i> ) <i>Pax</i> ), Euphorbiaceae, hardy cassava #
perforatum <i>L.</i> , Clusiaceae, St. John's wort	Medicago sativa <i>L.</i> (= <i>M. falcata</i> <i>L.</i> ), Fabaceae, alfalfa
Hypochoeris radicata <i>L.</i> , Asteraceae, hairy wild lettuce	Melaleuca
Hypoestes phyllostachya <i>Baker</i> , Acanthaceae, polka-dot-plant, *2002 #	<i>hypericifolia</i> <i>Sm.</i> , Myrtaceae, red-flowering tea tree <i>wilsonii</i> <i>F.Muell.</i> , Myrtaceae, violet honey-myrtle #
Ipomoea	Melia azedarach <i>L.</i> , Meliaceae, seringa or 'syringa'
alba <i>L.</i> , Convolvulaceae, moonflower	Melilotus alba <i>Medik.</i> , Fabaceae, white sweet clover
carnea <i>Jacq.</i> subsp. <i>fistulosa</i> ( <i>Mart. ex Choisy</i> ) <i>D.F.Austin</i> (= <i>I. fistulosa</i> <i>Mart. ex Choisy</i> ), Convolvulaceae, potato bush	Metasequoia glyptostroboides <i>Hu &amp; W.C.Cheng</i> , Cupressaceae, dawn redwood #
indica ( <i>Burm.</i> ) <i>Merr.</i> (= <i>I. congesta</i> <i>R.Br.</i> ), Convolvulaceae, perennial morning glory	Metrosideros excelsa <i>Sol. ex Gaertn.</i> (= <i>M. tomentosa</i> <i>A. Rich.</i> ), Myrtaceae, New Zealand bottlebrush
nil ( <i>L.</i> ) <i>Roth</i> , Convolvulaceae, Japanese morning glory	Michelia champaca <i>L.</i> , Magnoliaceae, champac magnolia, †Zimbabwe #
purpurea ( <i>L.</i> ) <i>Roth</i> , Convolvulaceae, common morning glory sp., Convolvulaceae	Mimosa
Iris pseudacorus <i>L.</i> , Iridaceae, yellow flag, *2004 #	<i>pigra</i> <i>L.</i> , Fabaceae, giant sensitive plant
Jacaranda mimosifolia <i>D.Don</i> , Bignoniacae, jacaranda	<i>pubica</i> <i>L.</i> var. <i>hispida</i> <i>Brenan</i> , Fabaceae, sensitive plant
Jasminum	Mirabilis jalapa <i>L.</i> , Nyctaginaceae, four-o'clock
humile <i>L.</i> , Oleaceae, yellow bush jasmine	Momordica charantia <i>L.</i> , Cucurbitaceae, bitter cucumber
mesnyi <i>Hance</i> , Oleaceae, primrose jasmine ??#	Mondia whitei ( <i>Hook.f.</i> ) <i>Skeels</i> (= <i>Chlorocodon whitei</i> <i>Hook.f.</i> ), Apocyn- aceae, †Zimbabwe & Malawi # but indigenous in South Africa
polyanthum <i>Franch.</i> , Oleaceae, creeping jasmine, *2001 #	Monstera deliciosa <i>Liebm.</i> , Araceae, Swiss-cheese plant #
Jatropha	Montanoa hibiscifolia <i>Benth.</i> , Asteraceae, tree daisy
curcas <i>L.</i> , Euphorbiaceae, physic nut, *2005 (1979 in Wells et al. (1986))	Moringa oleifera <i>Lam.</i> (= <i>M. pterygosperma</i> <i>Gaertn.</i> ), Moringaceae, horse-radish tree #
gossypiifolia <i>L.</i> , Euphorbiaceae, coral plant sp., Euphorbiaceae	Morus alba <i>L.</i> , Moraceae, white or common mulberry
Juniperus	Musa sp., Musaceae, banana tree #
pinchottii <i>Sudw.</i> , Cupressaceae, red-berry juniper #	Murraya paniculata ( <i>L.</i> ) <i>Jack.</i> (= <i>M. exotica</i> <i>L.</i> ), Rutaceae, orange jessamine, *2005 #
sp., Cupressaceae	Myoporum tenuifolium <i>G.Forst.</i> subsp. <i>montanum</i> ( <i>R.Br.</i> ) <i>Chinnock</i> (= <i>M. montanum</i> <i>R.Br.</i> ) ( <i>M. acuminatum</i> <i>R.Br.</i> misapplied in South Africa), Myoporaceae, manatoka
virginiana <i>L.</i> , Cupressaceae, red cedar	Myriophyllum
Koelreuteria paniculata <i>Laxm.</i> (= <i>K. apiculata</i> <i>Rehder &amp; E.H.Wilson</i> ), Sapindaceae, golden-rain tree *2001 #	<i>aquaticum</i> ( <i>Vell.</i> ) <i>Verdc.</i> (= <i>M. brasiliense</i> <i>Cambess.</i> ), Haloragaceae, parrot's feather
Lactuca serriola <i>L.</i> (= <i>L. scariola</i> <i>L.</i> ), Asteraceae, wild lettuce	<i>spicatum</i> <i>L.</i> , Haloragaceae, spiked water-milfoil
Lagerstroemia indica <i>L.</i> , Lythraceae, pride-of-India	Nassella
Lantana camara <i>L.</i> , Verbenaceae, lantana	<i>tenuissima</i> ( <i>Trin.</i> ) <i>Barkworth</i> (= <i>Stipa tenuissima</i> <i>Trin.</i> ), Poaceae, white tussock
Lemna	<i>trichotoma</i> ( <i>Nees</i> ) <i>Hack.</i> ex <i>Arechav.</i> (= <i>Stipa trichotoma</i> <i>Nees</i> ), Poaceae, nassella tussock
gibba <i>L.</i> , Lemnaceae, duckweed	Nasturtium officinale <i>R.Br.</i> (= <i>Rorippa nasturtium-aquaticum</i> ( <i>L.</i> ) <i>Hayek</i> ), Brassicaceae, watercress
sp., Lemnaceae	Nephrolepis exaltata ( <i>L.</i> ) <i>Schott</i> , Nephrolepidaceae, sword fern
Lepidium	
didymum <i>L.</i> (= <i>Coronopus didymus</i> ( <i>L.</i> ) <i>Sm.</i> ), Brassicaceae, swinecress	
draba <i>L.</i> (= <i>Cardaria draba</i> ( <i>L.</i> ) <i>Desv.</i> ), Brassicaceae, hoary cardaria	
Leptospermum laevigatum ( <i>Gaertn.</i> ) <i>F.Muell.</i> , Myrtaceae, Australian myrtle	
Leucaena leucocephala ( <i>Lam.</i> ) <i>de Wit</i> (= <i>L. glauca</i> <i>Benth.</i> ), Fabaceae, leucaena	
Ligustrum	
japonicum <i>Thunb.</i> , Oleaceae, Japanese wax-leaved privet	
lucidum <i>W.T.Aiton</i> , Oleaceae, Chinese wax-leaved privet	
ovalifolium <i>Hassk.</i> , Oleaceae, Californian privet	

## APPENDIX 5.—Species checklist (cont.)

Nerium oleander L., Apocynaceae, oleander	Physical
Nicandra physalodes (L.) Gaertn., Solanaceae, apple-of-Peru	peruviana L., Solanaceae, Cape gooseberry
Nicotiana	viscosa L., Solanaceae, sticky gooseberry
glauca Graham, Solanaceae, wild tobacco	
tabacum L., Solanaceae, tobacco ?#	
Nymphaea	Phytolacca
mexicana Zucc., Nymphaeaceae, yellow waterlily	dioica L., Phytolaccaceae, belhambra
×marliacea W.Watson, Nymphaeaceae, Marliac hybrid waterlily	icosandra L. (= <i>P. octandra</i> L.), Phytolaccaceae, forest inkberry
Oenothera	Pinus
biennis L., Onagraceae, evening primrose	canariensis C.Sm., Pinaceae, Canary pine
glazioviana Micheli (= <i>O. erythrosepala</i> Borbás), Onagraceae, evening	elliottii Engelm., Pinaceae, slash pine
primrose	halepensis Mill., Pinaceae, Aleppo pine
indecora Cambess., Onagraceae, evening primrose	patula Schiede ex Schtdl. & Cham., Pinaceae, patula pine
jamesii Torr. & A.Gray, Onagraceae, giant evening primrose	pinaster Aiton, Pinaceae, cluster pine
laciata Hill, Onagraceae, cutleaf evening primrose	pinea L., Pinaceae, umbrella pine
rosea L'Hér. ex Aiton, Onagraceae, rose evening primrose	radiata D.Don, Pinaceae, radiata pine
sp., Onagraceae	roxburghii Sarg. (= <i>P. longifolia</i> Roxb. ex Lamb.), Pinaceae, chir pine
tetraptera Cav., Onagraceae, white evening primrose	sp., Pinaceae
Olyra latifolia L., Poaceae	taeda L., Pinaceae, loblolly pine
Opuntia	Pistia stratiotes L., Araceae, water lettuce
aurantiaca Lindl., Cactaceae, jointed cactus	Pittosporum undulatum Vent., Pittosporaceae, Australian cheesewood
engelmannii Salm-Dyck ex Engelm. (= <i>O. lindheimeri</i> Engelm.),	Pityrogramma calomelanos (L.) Link, Adiantaceae, golden fern
Cactaceae, small round-leaved prickly pear	
exaltata A.Berger (= <i>Austrocylindropuntia exaltata</i> (A.Berger)	Plantago
Backeb.), Cactaceae, long-spine cactus	lanceolata L., Plantaginaceae, narrow-leaved ribwort
ficus-indica (L.) Mill. (= <i>O. megacantha</i> Salm-Dyck), Cactaceae,	major L., Plantaginaceae, broad-leaved ribwort
sweet prickly pear	virginica L., Plantaginaceae, dwarf plantain
fulgida Engelm. (= <i>Cylindropuntia fulgida</i> (Engelm.) F.M.Knuth) ( <i>O.</i>	Platanus
<i>rosea</i> DC. and <i>Cylindropuntia rosea</i> (DC.) Backeb. misapplied in	sp., Platanaceae #
South Africa), Cactaceae, chainfruit cholla or 'rosea cactus'	×acerifolia (Aiton) Willd. (= <i>P. hispanica</i> auct.), Platanaceae, London
humifusa (Raf.) Raf. (= <i>O. compressa</i> auct.), Cactaceae, large-flowered	planetree, *2004 #
prickly pear	Plectranthus comosus Sims (= <i>Coleus grandis</i> Cramer) ( <i>P. barbatus</i>
imbricata (Haw.) DC. (= <i>Cylindropuntia imbricata</i> (Haw.) F.M.Knuth),	Andrews misapplied in South Africa), Lamiaceae, Abyssinian coleus
Cactaceae, imbricate prickly pear	Polygonum aviculare L., Polygonaceae, prostrate knotweed
microdasys (Lehm.) Pfeiff., Cactaceae, yellow bunny-ears	Polypogon monspeliensis (L.) Desf., Poaceae, beardgrass
monacantha Haw. (= <i>O. vulgaris</i> auct.), Cactaceae, cochineal prickly	Ponaderis kumeraho A.Cunn., Rhamnaceae, kumarahou #
pear	Pontederia cordata L., Pontederiaceae, pickerel weed
robusta H.L.Wendl. ex Pfeiff., Cactaceae, blue-leaf cactus	
sp., Cactaceae	Populus
spinulifera Salm-Dyck, Cactaceae, large round-leaved prickly pear ?#	alba L., Salicaceae, white poplar
stricta (Haw.) Haw. (possibly both var. dillenii and var. stricta), Cac-	deltoides W.Bartram ex Marshall, Salicaceae, match poplar
taceae, Australian pest pear	nigra L. var. italica Münchh., Salicaceae, Lombardy poplar
stricta ×humifusa?, Cactaceae	×canescens (Aiton) Sm., Salicaceae, grey poplar
tomentosa Salm-Dyck, Cactaceae, velvet opuntia, *2003 #	Portulaca oleracea L., Portulacaceae, purslane
Orobanche minor Sm., Orobanchaceae, clover broomrape	Prosopis
Oxalis corniculata L., Oxalidaceae, creeping oxalis	glandulosa Torr. var. torreyana (Benson) Johnst., Fabaceae, honey
Pandanus sp., Pandanaceae, screw-pine #	mesquite
Paraserianthes lophantha (Willd.) I.C.Nielsen (= <i>Albizia lophantha</i>	velutina Wooton, Fabaceae, velvet mesquite
(Willd.) Benth.), Fabaceae, stinkbean	
Parkinsonia aculeata L., Fabaceae, Jerusalem thorn	Prunus
Parthenium hysterophorus L., Asteraceae, parthenium	armeniaca L., Rosaceae, apricot
Parthenocissus quinquefolia (L.) Planch., Vitaceae, Virginia cree-	cerasoides D.Don, Rosaceae, Himalayan flowering cherry, †Zimbabwe
per #	# abundant locally
Paspalum	persica (L.) Batsch, Rosaceae, peach
dilatatum Poir., Poaceae, common paspalum	serotina Ehrh., Rosaceae, black cherry
notatum Flüggé, Poaceae, *2006 (PRE 1944)	
quadrifarium Lam., Poaceae	Psidium
urvilei Steud., Poaceae, tall paspalum	cattleyanum Sabine (= <i>P. littorale</i> Raddi var. <i>longipes</i> (O.Berg)
Passiflora	Fosberg), Myrtaceae, strawberry guava
caerulea L., Passifloraceae, blue passion flower	guajava L., Myrtaceae, guava
edulis Sims, Passifloraceae, purple granadilla	guineense Sw., Myrtaceae, Brazilian guava
sp., Passifloraceae	sp., Myrtaceae
suberosa L., Passifloraceae, devil's pumpkin	×durbanensis <i>Baijnath ined.</i> , Myrtaceae, Durban guava
subpetiata Ortega, Passifloraceae, granadina	
tripartita (Juss.) Poir. var. mollissima (Kunth) Holm-Niels. & P.Jorg.	Pterocarya stenoptera C.DC., Juglandaceae, Chinese wing-nut #
(= <i>P. mollissima</i> (Kunth) L.H.Bailey), Passifloraceae, banana poka	Pueraria montana (Lour.) Merr. var. lobata (Willd.) Maesen &
Pennisetum	S.M.Almeida (= <i>P. lobata</i> (Willd.) Ohwi), Fabaceae, kudzu vine
clandestinum Hochst. ex Chiov., Poaceae, Kikuyu grass	Punica granatum L., Punicaceae, pomegranate
purpureum Schumach., Poaceae, Napier grass	
setaceum (Forsk.) Chiov., Poaceae, fountain grass	Pyracantha
sp., Poaceae	angustifolia (Franch.) C.K.Schneid., Rosaceae, yellow firethorn
villosum R.Br. ex Fresen., Poaceae, feathertop	coccinea M.Roem., Rosaceae, red firethorn
Pereskia aculeata Mill., Cactaceae, pereskia	crenulata (D.Don) M.Roem., Rosaceae, Himalayan firethorn
Persea americana Mill. (= <i>P. gratissima</i> C.F.Gaertn.), Lauraceae,	sp., Rosaceae
avocado pear #	
Persicaria lapathifolia (L.) Gray (= <i>Polygonum lapathifolium</i> L.),	Pyrus sp., Rosaceae, pear tree ??
Polygonaceae, spotted knotweed	
Phoenix	Quercus
canariensis Hort. ex Chabaud, Arecaceae, Canary date palm	canariensis Willd. (= <i>Q. mirbeckii</i> Durieu), Fagaceae, Algerian oak ??
dactylifera L., Arecaceae, real date palm	ceris L., Fagaceae, Turkey oak ??
Phormium tenax J.R.Forst. & G.Forst., Phormiaceae, New Zealand flax #	palustris Münchh., Fagaceae, pin oak

## APPENDIX 5.—Species checklist (cont.)

Ricinus communis L., Euphorbiaceae, castor-oil plant	tree tomato
Rivina humilis L., Phytolaccaceae, bloodberry	capsicoides All., Solanaceae, devil's apple
Robinia pseudoacacia L., Fabaceae, black locust	chrysotrichum Schtdl. (= <i>S. hispidum</i> auctt. non Pers.), Solanaceae, giant devil's fig
Rosa	elaeagnifolium Cav., Solanaceae, silver-leaf bitter apple
multiflora Thunb., Rosaceae, multiflora rose	mauritianum Scop. (= <i>S. auriculatum</i> Aiton), Solanaceae, bugweed
rubicinosa L. (= <i>R. eglanteria</i> L.), Rosaceae, eglantine	pseudocapsicum L., Solanaceae, Jerusalem cherry
sp., Rosaceae #	seaforthianum Andrews, Solanaceae, potato creeper
?xodorata (Andrews) Sweet, Rosaceae, tea rose #	sisymbriifolium Lam., Solanaceae, dense-thorned bitter apple
Rubus	sp., Solanaceae
cuneifolius Pursh, Rosaceae, American bramble	torvum Sw. (= <i>S. mannii</i> C.H.Wright), Solanaceae
flagellaris Willd., Rosaceae	viarum Dunal, Solanaceae, tropical soda apple, *2006 (PRE 1962)
fruticosus L. agg., Rosaceae, European blackberry	Sonchus oleraceus L., Asteraceae, sowthistle
?pascuus L.H.Bailey, Rosaceae	Sophora cf. davidii (Franch.) Skeels, Fabaceae #
phoenicolasius Maxim., Rosaceae	Sorghum halepense (L.) Pers. (= <i>S. alnum</i> Parodi), Poaceae, Johnson grass
rosifolius Sm., Rosaceae	Spartium junceum L., Fabaceae, Spanish broom
sp., Rosaceae	Spathodea campanulata P.Beauv., Bignoniaceae, African flame tree
*proteus C.H.Stirt., Rosaceae, Bramble, Graskop/Sabie hybrid	Sphagneticola trilobata (L.) Pruski (= <i>Thelechitonita trilobata</i> (L.) H.Rob. & Cuatrec, <i>Wedelia trilobata</i> (L.) Hitchc.), Asteraceae, Singapore daisy
Rumex	Spiraea canoniensis Lour., Rosaceae, Cape may #
acetosella L. subsp. pyrenaicus ( <i>Pourr. ex Lapeyr.</i> ) Akeroyd (= <i>R. angiocarpus</i> auct.), Polygonaceae, sheep sorrel	Stellaria media (L.) Vill., Caryophyllaceae, chickweed
crispus L., Polygonaceae, curly dock	Stenocarpus sinuatus Endl., Proteaceae, firewheel tree ?#
usambarensis (Dammer) Dammer (= <i>R. nervosus</i> Vahl var. <i>usambarensis</i> Dammer), Polygonaceae, rumex	Styphnolobium japonicum (L.) Schott (= <i>Sophora japonica</i> L.), Fabaceae, Japanese pagoda tree ?#
Saccharum officinarum L., Poaceae, sugar cane	Symphytum subulatum (Michx.) G.L.Nesom var. <i>squamatum</i> (Spreng.) S.D.Sundb. (= <i>Aster squamatus</i> (Spreng.) Hieron.), Asteraceae, swamp aster
Salix	Synccarpia glomulifera (Sm.) Nied. (= <i>S. laurifolia</i> Ten.), Myrtaceae, turpentine tree
babylonica L., Salicaceae, weeping willow	Syzygium
caprea L., Salicaceae, pussy willow	cumini (L.) Skeels, Myrtaceae, jambolan
fragilis L., Salicaceae, crack willow	jambos (L.) Alston, Myrtaceae, rose apple
Salsola	paniculatum Gaertn. (= <i>Eugenia myrtifolia</i> Sims), Myrtaceae, Australian water pear
kali L., Chenopodiaceae, common saltwort	Tabebuia chrysotricha (Mart. ex DC.) Standl. (= <i>Tecoma chrysotricha</i> Mart. ex DC.), Bignoniaceae, yellow trumpet tree ?#
tragus L. (= <i>S. australis</i> R.Br.), Chenopodiaceae, Russian tumbleweed	Tagetes minuta L., Asteraceae, khaki weed
Salvia tiliifolia Vahl, Lamiaceae, Lindenleaf sage, *2005 (PRE 1943)	Tamarix
Salvinia molesta D.S.Mitch. ( <i>S. auriculata</i> Aubl. misapplied in South Africa), Salviniaceae, Kariba weed	chinensis Lour., Tamaricaceae, Chinese tamarisk
Sambucus	ramosissima Ledeb., Tamaricaceae, pink tamarisk
canadensis L. (= <i>S. nigra</i> L. subsp. <i>canadensis</i> (L.) Bolli), Caprifoliaceae, Canadian elder	sp., Tamaricaceae
nigra L., Caprifoliaceae, European elder, *2004	Taraxacum officinale F.H.Wigg. agg., Asteraceae, common dandelion
sp., Caprifoliaceae	Tecoma
Schefflera	stans (L.) Juss. ex Kunth, Bignoniaceae, yellow bells
actinophylla (Endl.) Harms (= <i>Brassaia actinophylla</i> Endl.), Araliaceae, Australian cabbage tree #	tenuiflora (A.DC.) Fabris, Bignoniaceae, *2004
arboricola (Hayata) Merr., Araliaceae, dwarf umbrella tree, *2005 #	Tephrocactus
elegantissima (hort. Veitch. ex Mast.) Lowry & Frodin (= <i>Dizygotheca elegantissima</i> (hort. Veitch. ex Mast.) R.Vig. Guillaumin), Araliaceae, *2005 #	articulatus (Pfeiff.) Backeb., Cactaceae, paper-spine cholla
Schinus	?aoracanthus (Lem.) Lem. (= ? <i>Opuntia aoracantha</i> Lemaire), Cactaceae
molle L., Anacardiaceae, pepper tree	sp., Cactaceae
terebinthifolius Raddi, Anacardiaceae, Brazilian pepper tree	Thevetia peruviana (Pers.) K.Schum. (= <i>T. nerifolia</i> Juss. ex Steud.), Apocynaceae, yellow oleander
Schizolobium parahyba (Vell.) S.F.Blake var. parahyba (= <i>S. excelsum</i> Vogel), Fabaceae, parasol tree #	Tipuana tipu (Benth.) Kuntze (= <i>T. speciosa</i> Benth.), Fabaceae, tipu tree
Schkuhria pinnata (Lam.) Kuntze ex Thell., Asteraceae, dwarf marigold	Tithonia
Senna	diversifolia (Hemsl.) A.Gray, Asteraceae, Mexican sunflower
bicapsularis (L.) Roxb. (= <i>Cassia bicapsularis</i> L.), Fabaceae, rambling cassia	rotundifolia (Mill.) S.F.Blake, Asteraceae, red sunflower
corymbosa (Lam.) H.S.Irwin & Barneby (= <i>Cassia corymbosa</i> Lam.), Fabaceae, autumn cassia	Toona ciliata M.Roem. (= <i>Cedrela toona</i> Roxb. ex Willd.), Meliaceae, toon tree
didymobotrya (Fresen.) H.S.Irwin & Barneby (= <i>Cassia didymobotrya</i> Fresen.), Fabaceae, peanut butter cassia	Terilis arvensis (Huds.) Link., Apiaceae, spreading hedge-parsley
hirsuta (L.) H.S.Irwin & Barneby (= <i>Cassia hirsuta</i> L.), Fabaceae	Toxicodendron succedaneum (L.) Kuntze (= <i>Rhus succedanea</i> L.), Anacardiaceae, wax tree
multiglandulosa (Jacq.) H.S.Irwin & Barneby (= <i>Cassia multiglandulosa</i> Jacq., <i>C. tomentosa</i> L.f.), Fabaceae	Tradescantia
obtusifolia (L.) H.S.Irwin & Barneby (= <i>Cassia obtusifolia</i> L.), Fabaceae	zebrina hort. ex Bosse (= <i>Zebrina pendula</i> Schnizl.), Commelinaceae, wandering jew, *2005 #
occidentalis (L.) Link (= <i>Cassia occidentalis</i> L.), Fabaceae, wild coffee	fluminensis Vell., Commelinaceae, wandering Jew, *2001 (Wells et al. 1986)
pendula (Willd.) H.S.Irwin & Barneby var. glabrata (Vogel) H.S.Irwin & Barneby (= <i>Cassia coluteoides</i> Collad.), Fabaceae	Tragopogon dubius Scop. (= <i>T. major</i> Jacq.), Asteraceae, yellow salsify
septentrionalis (Viv.) H.S.Irwin & Barneby (= <i>Cassia floribunda</i> sensu Brenan non Cav.), Fabaceae, arsenic bush	Tridax procumbens L., Asteraceae, tridax daisy
sp., Fabaceae	Triplaris americana L., Polygonaceae, triplaris ?#
Sesbania	Triticum aestivum L., Poaceae, volunteer wheat
bispinosa (Jacq.) W.Wight var. bispinosa (= <i>S. aculeata</i> Pers.), Fabaceae, spiny sesbania	Tropaeolum majus L., Tropaeolaceae, nasturtium
punicea (Cav.) Benth., Fabaceae, red sesbania	Ulex europaeus L., Fabaceae, European gorse
Sigosbeckia orientalis L., Asteraceae, St. Paul's wort	Ulmus
Silybum Marianum (L.) Gaertn., Asteraceae, milk thistle	parvifolia Jacq. (= <i>U. chinensis</i> Pers.), Ulmaceae, Chinese elm
Sisymbrium orientale L., Brassicaceae, Indian hedge mustard	procera Salisb., Ulmaceae, English elm #
Sisyrinchium sp., Iridaceae	sp., Ulmaceae #
Solanum	Verbena
betaceum Cav. (= <i>Cyphomandra betacea</i> (Cav.) Sendtn.), Solanaceae,	bonariensis L., Verbenaceae, wild verbena

## APPENDIX 5.—Species checklist (cont.)

<i>Verbena</i> (cont.)											
<i>brasiliensis</i> Vell.	Verbenaceae, slender wild verbena										
<i>officinalis</i> L.	Verbenaceae, European verbena										
<i>rigida</i> Spreng. var. <i>rigida</i> (= <i>V. venosa</i> Gillies & Hook.), Verbenaceae,	veined vervain										
<i>Verbesina enclooides</i> (Cav.) Benth. & Hook.f. ex A. Gray	Asteraceae, golden crownbeard										
<i>Vinca major</i> L.	Apocynaceae, greater periwinkle										
<i>Viola</i>											
<i>hederacea</i> Labill. (= <i>Erpetion reniforme</i> Sweet), Violaceae, Australian violet, *2001 #											
<i>princeana</i> Pollard (= <i>V. sororia</i> Willd.), Violaceae, confederate violet, *2005 #											
<i>Vitex</i>											
<i>agnus-castus</i> L.	Verbenaceae, lilac chastetree, *2004 (PRE 1975)										
<i>Yucca aloifolia</i> L.	Agavaceae, Spanish bayonet										
<i>Zinnia peruviana</i> (L.) L. (= <i>Z. multiflora</i> L.)	Asteraceae, redstar zinnia
