

FSA contributions 1: Aquifoliaceae

S. ANDREWS*

Trees or shrubs. Leaves alternate, rarely opposite, simple, mostly evergreen; stipules minute. Inflorescences in axillary cymes. Flowers unisexual, regular, small, sepals and petals usually fused at base, rarely free. Sepals 4–6(–8), imbricate. Petals 3–5(–8), imbricate, white. Stamens 4–5(–8), usually adnate to petals; anthers 2-thecous. Ovary superior (2)4–6(–22)-locular; style terminal; stigma capitate or discoid. Fruit a globose or ovoid berry, containing 2–10(–20) pyrenes. Seeds with copious endosperm.

Found throughout the tropical, subtropical or temperate regions of the world. *Ilex* and *Nemopanthus* are recognised in the family, which is often placed in the Celastrales. Other genera such as *Phelline*, *Sphenostemon* and *Oncotheca* are now placed in separate families by several authors.

Type species: *I. aquifolium* L.

Description as for family but petals fused at the base with adnate stamens.

A genus of about 400 species of which only one is indigenous to southern Africa.

The name *Ilex* is derived from its resemblance to the leaves of *Quercus ilex*, the evergreen oak.

Ilex mitis (L.) Radlk. in Reports of the British Association for the Advancement of Science 1885: 1081 (1886); Loes.: 246 (1895); Loes.: 240 (1901); Baker f.: 43 (1911); Loes.: 463 (1912); Engl.: 218 (1921); Exell: 74 (1927); Burt Davy: 445 (1932); Lebrun: 134 (1935); Loes.: 65 (1942); H. Ilex mitis (L.) Radlk. forma *capensis* (Sond.) Loes.: 242 (1901).

Celastrus sieberi Bernh. in Hb. Krauss., nom. nud.

Densely crowned tree or shrub to 16 m tall, occasionally to 33 m, evergreen; trunk up to 1 m in diameter, rarely to 5.5 m. Bark smooth when young, whitish or grey, later becoming pustulate and somewhat chunky or fissured. (older Cape trees often have a pinkish red bark). Young branchlets often puberulous, purplish. Leaves alternate, glabrous, elliptic to elliptic-lanceolate, oblong-elliptic or obovate-elliptic, 2.4–9.5(–11.0) × 0.9–2.5(–3.5) mm, acute, apiculate or rounded at apex, rarely acuminate (often kinked when dried), obtuse or cuneate at base, dark green, often dull above, paler below; midrib pale, sunken; entire or sometimes spiny near apex or in upper half of leaf only, (young foliage olive or reddish green, spiny), petiole 0.7–2.0 mm long, glabrous, channelled, usually reddish purple; stipules semi-persistent. Inflorescence 1–few-flowered cymes, pubescent. Calyx pubescent, lobes 5 or 6, 0.5–1.0 mm long, ciliate. Petals white, glabrous, 2.3–3.0 × 1.5–2.0 mm, lobes 5 or 6, ciliate, fragrant. Stamens 5 or 6, 1.5–2.5 mm long, staminodes shorter. Ovary globose, 1.6 × 1.3 mm, stigma sessile, discoid, prominent; rudimentary ovary conical. Fruit 4–6 mm in diam., globose, slowly ripening from greenish pink to dark crimson; pyrenes 5 or 6, 3.0–3.5 × 1.0–1.5 mm.

Widespread in Africa south of the Sahara, down to the Cape. Does not occur in Namibia, Botswana and in the drier parts of the Transvaal, Orange Free State and the Cape. Most frequently growing beside rivers and streams, in moist evergreen forests or low montane grassveld. Flowering from September to February and fruiting from December to June. Usually found between 7–600 m near the coast and 1 000–2 130 m further inland. Ranges from common to rare depending on locality. Figure 1.

Vouchers: Compton 32099 (PRE); Hemm 29 (PRE); Scheepers 772 (K, PRE); Strey 9880 (K, PRE); Williams 593 (K, PRE).

Has been used as an enema for colic in children (southern Sotho); as a purgative (Kgatla); a lather is used

* The Herbarium, Royal Botanic Gardens, Kew, Richmond, Surrey, TW9 3AB, England.
MS. received August 1990.

FIGURE 1.—*Ilex mitis* var. *mitis*. A–F, male: A, flowering branch, $\times 1$; B, bud, $\times 4$; C, flower, $\times 4$; D, calyx, opened out, $\times 4$; E, corolla, opened out to show stamens, $\times 4$; F, rudimentary ovary, $\times 4$. G–J, female: G, flower, $\times 4$; H, corolla, opened out to show staminodes, $\times 4$; I, ovary and calyx, $\times 4$; J, detail from fruiting branch, $\times 1$. A–F, Jessel 61; G–I, Battiscombe 643; J, A.S. Thomas 2650 (Reproduced from the *Flora of tropical East Africa*, with permission of the Director of the Royal Botanic Gardens, Kew. Artist Dorothy Thompson.).

for washing the bodies of influenza sufferers (Zulu) and in witchcraft (Sotho). The wood is used for furniture and ceilings, brake blocks, railway sleepers and for firewood.

Common names: Litota, liBota (Swati); Munamiti (Bakone Suto); Mutanzwa-Khamelo (Venda); Phukhu, Motoo a phofu, Mofusata (S Sotho); iPhuphuma (Zulu); monamane (N Sotho); unDuma (Xhosa, Zulu); phukgu, phugile (S Sotho); waterboom, waterhout, without, wit-waterhout (Afrikaans); Cape holly, wild holly, water tree, African holly (English).

Cultivated in Europe as a glasshouse or stove plant before 1816.

Var. *schliebenii* Loes. is only known from the Morogoro District, Tanzania and differs from var. *mitis* in its smaller, almost round leaves.

Introduced species

Voucher specimens have been seen for the following species which are cultivated. Other taxa are mentioned in *Hollies—underused trees and shrubs for cultivation in southern Africa* (S. Andrews in prep.).

***Ilex aquifolium* L.** Common or English holly. Native of S & W Europe, North Africa and W Asia. Shrub, evergreen. Bark grey. Leaves elliptic or ovate, dark glossy green, undulate, entire or when spinose, divaricating. Flowers white, rarely tinged pink. Fruits spherical, red. In parks and gardens.

Vouchers: S. Andrews 956 (PRE); L.E. Codd 10449 (PRE); F. Venter 12107 (PRE).

Ilex cornuta Lindl. & Paxton. Horned holly. Native of China and Korea. Shrub, evergreen, dense rounded habit. Leaves rectangular, dull green, spines variable, from 5–9 on older plants. Flowers white. Fruits spherical, red. In parks and gardens.

Voucher: S. Andrews 985.

I. cornuta 'Burfordii'. Leaves with terminal spine only. Female. In gardens.

Vouchers: S. Andrews 986 (PRE); L.D. du Toit 130 (PRE).

Ilex × koehneana Loes. (*I. aquifolium* L. × *I. latifolia* Thunb.). Evergreen tree or shrub. Leaves oblong to elliptic, large, glossy mid-green, strongly spined. Flowers white. Fruits globose, bright red. In gardens.

Voucher: S. Andrews 914 (K, PRE).

Ilex paraguariensis A. St.-Hil. Mate, Yerba Mata, Paraguay tea. Native of Paraguay, Brazil, Uruguay, Argentina. Evergreen tree to 12 m. Bark grey. Leaves oblong to obovate-oblong, obtuse, serrate, dull mid-green. Flowers greenish white. Fruits globose, glossy dark red. Planted at Westfalia Estate, Duiwelskloof, probably for economic beverage which is made from the dried leaves.

Voucher: J.J. Bos 1093 (K, PRE).

Ilex pernyi Franch. Native of Central and W China. Shrub, evergreen. Leaves nearly sessile, triangular, 5-spined, squared at base, dark glossy green. Flowers yellowish. Fruit spherical, red. Seen in gardens.

Voucher: S. Andrews 983 (PRE).

Ilex vomitoria Aiton (*I. cassine* Walter non L.) Yaupon. Native of SE United States and Mexico. Tree or shrub to 7 m, evergreen. Leaves ovate or elliptic, obtuse, crenate, dark glossy green. Flowers white. Fruit globose, scarlet. Planted in Grahamstown Botanic Garden. Foliage contains a caffeine used by the North American Indians.

Voucher: S. Andrews 1162 (K, PRE).
